

CSci 127: Introduction to Computer Science

hunter.cuny.edu/csci

Frequently Asked Questions

From email and tutoring.

- **Should I be receiving email from this course?**

Frequently Asked Questions

From email and tutoring.

- **Should I be receiving email from this course?**

Absolutely!!! *We send at least 2 emails each week with important information. If you do not receive them, please check your email associated with Blackboard and your Spam folder.*

Frequently Asked Questions

From email and tutoring.

- **Should I be receiving email from this course?**

Absolutely!!! *We send at least 2 emails each week with important information. If you do not receive them, please check your email associated with Blackboard and your Spam folder.*

- **Why so many quizzes and programming assignments?**

Frequently Asked Questions

From email and tutoring.

- **Should I be receiving email from this course?**

Absolutely!!! *We send at least 2 emails each week with important information. If you do not receive them, please check your email associated with Blackboard and your Spam folder.*

- **Why so many quizzes and programming assignments?**

*Especially for introductory courses, research shows that a large number of frequent, **low-stakes** assignments is more effective than few large projects.*

Frequently Asked Questions

From email and tutoring.

- **Should I be receiving email from this course?**

Absolutely!!! *We send at least 2 emails each week with important information. If you do not receive them, please check your email associated with Blackboard and your Spam folder.*

- **Why so many quizzes and programming assignments?**

*Especially for introductory courses, research shows that a large number of frequent, **low-stakes** assignments is more effective than few large projects.*

- **How do I manage all the work for this class?**

Frequently Asked Questions

From email and tutoring.

- **Should I be receiving email from this course?**

Absolutely!!! *We send at least 2 emails each week with important information. If you do not receive them, please check your email associated with Blackboard and your Spam folder.*

- **Why so many quizzes and programming assignments?**

*Especially for introductory courses, research shows that a large number of frequent, **low-stakes** assignments is more effective than few large projects.*

- **How do I manage all the work for this class?**

Use the lab time effectively. Review class recaps.

Frequently Asked Questions

From email and tutoring.

- **How do I prepare for the final exam?**

Frequently Asked Questions

From email and tutoring.

- **How do I prepare for the final exam?**

Assuming you are already attending lecture meetings and reading the Lab each class,

Frequently Asked Questions

From email and tutoring.

- **How do I prepare for the final exam?**

Assuming you are already attending lecture meetings and reading the Lab each class,

- ▶ *Take the quizzes, if you get a wrong answer, review it and make sure you understand.*

Frequently Asked Questions

From email and tutoring.

- **How do I prepare for the final exam?**

Assuming you are already attending lecture meetings and reading the Lab each class,

- ▶ *Take the quizzes, if you get a wrong answer, review it and make sure you understand.*
- ▶ *Work-on and **understand** the programming assignments.*

Frequently Asked Questions

From email and tutoring.

● How do I prepare for the final exam?

Assuming you are already attending lecture meetings and reading the Lab each class,

- ▶ *Take the quizzes, if you get a wrong answer, review it and make sure you understand.*
- ▶ *Work-on and **understand** the programming assignments.*
- ▶ *Take past exams available on the course webpage. Take it without looking at the answers (give yourself 1.5 hours) then compare with answer key.*

Frequently Asked Questions

From email and tutoring.

● How do I prepare for the final exam?

Assuming you are already attending lecture meetings and reading the Lab each class,

- ▶ *Take the quizzes, if you get a wrong answer, review it and make sure you understand.*
- ▶ *Work-on and **understand** the programming assignments.*
- ▶ *Take past exams available on the course webpage. Take it without looking at the answers (give yourself 1.5 hours) then compare with answer key.*
- ▶ *Condense the skeletal notes we provide for each lab into a smaller set of notes for quick reference.*

Frequently Asked Questions

From email and tutoring.

● How do I prepare for the final exam?

Assuming you are already attending lecture meetings and reading the Lab each class,

- ▶ *Take the quizzes, if you get a wrong answer, review it and make sure you understand.*
- ▶ *Work-on and **understand** the programming assignments.*
- ▶ *Take past exams available on the course webpage. Take it without looking at the answers (give yourself 1.5 hours) then compare with answer key.*
- ▶ *Condense the skeletal notes we provide for each lab into a smaller set of notes for quick reference.*
- ▶ *As you practice, keep refining you reference sheet that you can keep handy during the exam (write down anything you wished you could quickly look up while taking the practice exam)*

Frequently Asked Questions

From email and tutoring.

80
81     #Shows the original image:
82     plt.imshow(img)          #Load image into pyplot
83     plt.show()               #Show the image (waits until closed to continue)
84
85
```

- The `main()` is written for you.

From Last Time: koalas

```
69 def main():
70     inFile = input('Enter image file name: ')
71     img = plt.imread(inFile)
72
73     #Divides the image in 1/2, 1/4, 1/8, ... 1/2^8, and displays each:
74     for i in range(8):
75         img2 = img.copy()    #Make a copy to average
76         quarter(img2,i)      #Split in half i times, and average regions
77
78         plt.imshow(img2)     #Load our new image into pyplot
79         plt.show()           #Show the image (waits until closed to continue)
80
81     #Shows the original image:
82     plt.imshow(img)          #Load image into pyplot
83     plt.show()               #Show the image (waits until closed to continue)
84
85
```

- The `main()` is written for you.
- Only fill in two functions: `average()` and `setRegion()`.

Top-Down Design

- The last example demonstrates **top-down design**: breaking into subproblems, and implementing each part separately.

Top-Down Design

- The last example demonstrates **top-down design**: breaking into subproblems, and implementing each part separately.
 - ▶ Break the problem into tasks for a “To Do” list.

Top-Down Design

- The last example demonstrates **top-down design**: breaking into subproblems, and implementing each part separately.
 - ▶ Break the problem into tasks for a “To Do” list.
 - ▶ Translate list into function names & inputs/returns.

Top-Down Design

- The last example demonstrates **top-down design**: breaking into subproblems, and implementing each part separately.
 - ▶ Break the problem into tasks for a “To Do” list.
 - ▶ Translate list into function names & inputs/returns.
 - ▶ Implement the functions, one-by-one.

Top-Down Design

- The last example demonstrates **top-down design**: breaking into subproblems, and implementing each part separately.
 - ▶ Break the problem into tasks for a “To Do” list.
 - ▶ Translate list into function names & inputs/returns.
 - ▶ Implement the functions, one-by-one.
- Excellent approach since you can then test each part separately before adding it to a large program.

Top-Down Design

- The last example demonstrates **top-down design**: breaking into subproblems, and implementing each part separately.
 - ▶ Break the problem into tasks for a “To Do” list.
 - ▶ Translate list into function names & inputs/returns.
 - ▶ Implement the functions, one-by-one.
- Excellent approach since you can then test each part separately before adding it to a large program.
- Very common when working with a team: each has their own functions to implement and maintain.

Challenge:

- Write the missing functions for the program:

```
def main():  
    tess = setUp()      #Returns a purple turtle with pen up.  
    for i in range(5):  
        x,y = getInput()    #Asks user for two numbers.  
        markLocation(tess,x,y) #Move tess to (x,y) and stamp.
```

Challenge:

- Write the missing functions for the program:

```
def main():  
    tess = setUp()          #Returns a purple turtle with pen up.  
    for i in range(5):  
        x,y = getInput()      #Asks user for two numbers.  
        markLocation(tess,x,y) #Move tess to (x,y) and stamp.
```

Group Work: Fill in Missing Pieces

```
def main():  
    tess = setUp()      #Returns a purple turtle with pen up.  
    for i in range(5):  
        x,y = getInput()    #Asks user for two numbers.  
        markLocation(tess,x,y) #Move tess to (x,y) and stamp.
```

Group Work: Fill in Missing Pieces

- 1 Write import statements.

```
import turtle
```

```
def main():  
    tess = setUp()      #Returns a purple turtle with pen up.  
    for i in range(5):  
        x,y = getInput()    #Asks user for two numbers.  
        markLocation(tess,x,y) #Move tess to (x,y) and stamp.
```

Third Part: Fill in Missing Pieces

- ① Write import statements.
- ② Write down new function names and inputs.

```
import turtle
def setUp():
    #FILL IN
def getInput():
    #FILL IN
def markLocation(t,x,y):
    #FILL IN

def main():
    tess = setUp()      #Returns a purple turtle with pen up.
    for i in range(5):
        x,y = getInput()      #Asks user for two numbers.
        markLocation(tess,x,y) #Move tess to (x,y) and stamp.
```

Third Part: Fill in Missing Pieces

- 1 Write import statements.
- 2 Write down new function names and inputs.
- 3 Fill in return values.

```
import turtle

def setUp():
    #FILL IN
    return(newTurtle)

def getInput():
    #FILL IN
    return(x,y)

def markLocation(t,x,y):
    #FILL IN

def main():
    tess = setUp()      #Returns a purple turtle with pen up.
    for i in range(5):
        x,y = getInput()      #Asks user for two numbers.
        markLocation(tess,x,y) #Move tess to (x,y) and stamp.
```

Third Part: Fill in Missing Pieces

- 1 Write import statements.
- 2 Write down new function names and inputs.
- 3 Fill in return values.
- 4 Fill in body of functions.

```
import turtle

def setUp():
    newTurtle = turtle.Turtle()
    newTurtle.color("purple")
    newTurtle.penup()
    return(newTurtle)

def getInput():
    x = int(input('Enter x: '))
    y = int(input('Enter y: '))
    return(x,y)

def markLocation(t,x,y):
    t.goto(x,y)
    t.stamp()

def main():
    tess = setUp()    #Returns a purple turtle with pen up.
    for i in range(5):
```

Challenge:

- Write a function that takes a number as an input and prints its corresponding name.

Challenge:

- Write a function that takes a number as an input and prints its corresponding name.
- For example,

Challenge:

- Write a function that takes a number as an input and prints its corresponding name.
- For example,
 - ▶ `num2string(0)` returns: zero

Challenge:

- Write a function that takes a number as an input and prints its corresponding name.
- For example,
 - ▶ `num2string(0)` returns: zero
 - ▶ `num2string(1)` returns: one

Challenge:

- Write a function that takes a number as an input and prints its corresponding name.
- For example,
 - ▶ `num2string(0)` returns: zero
 - ▶ `num2string(1)` returns: one
 - ▶ `num2string(2)` returns: two

Challenge:

- Write a function that takes a number as an input and prints its corresponding name.
- For example,
 - ▶ `num2string(0)` returns: zero
 - ▶ `num2string(1)` returns: one
 - ▶ `num2string(2)` returns: two
- You may assume that only single digits, 0,1,...,9, are given as input.

Today's Topics

- Recap: Functions & Top Down Design
- **Mapping GIS Data**
- Random Numbers
- Indefinite Loops

Folium

Folium

- A module for making HTML maps.

Folium

Folium

Folium

- A module for making HTML maps.
- It's a Python interface to the popular `leaflet.js`.

Folium

Folium

- A module for making HTML maps.
- It's a Python interface to the popular `leaflet.js`.
- Outputs `.html` files which you can open in a browser.

Folium

Folium

- A module for making HTML maps.
- It's a Python interface to the popular `leaflet.js`.
- Outputs `.html` files which you can open in a browser.
- An extra step:

Folium

Folium

- A module for making HTML maps.
- It's a Python interface to the popular `leaflet.js`.
- Outputs `.html` files which you can open in a browser.
- An extra step:

Write code. \rightarrow *Run program.* \rightarrow *Open .html in browser.*

Demo

(Map created by Folium.)

Folium

- To use:
`import folium`

Folium

Folium

Folium

- To use:
`import folium`
- Create a map:
`myMap = folium.Map()`

Folium

Folium

- To use:
`import folium`
- Create a map:
`myMap = folium.Map()`
- Make markers:
`newMark = folium.Marker([lat,lon],popup=name)`

Folium

Folium

- To use:
`import folium`
- Create a map:
`myMap = folium.Map()`
- Make markers:
`newMark = folium.Marker([lat,lon],popup=name)`
- Add to the map:
`newMark.add_to(myMap)`

Folium

Folium

- To use:
`import folium`
- Create a map:
`myMap = folium.Map()`
- Make markers:
`newMark = folium.Marker([lat,lon],popup=name)`
- Add to the map:
`newMark.add_to(myMap)`
- Many options to customize background map ("tiles") and markers.

Demo

(Python program using Folium.)

In Pairs of Triples

- Predict which each line of code does:

```
m = folium.Map(  
    location=[45.372, -121.6972],  
    zoom_start=12,  
    tiles='Stamen Terrain'  
)  
  
folium.Marker(  
    location=[45.3288, -121.6625],  
    popup='Mt. Hood Meadows',  
    icon=folium.Icon(icon='cloud')  
) .add_to(m)  
  
folium.Marker(  
    location=[45.3311, -121.7113],  
    popup='Timberline Lodge',  
    icon=folium.Icon(color='green')  
) .add_to(m)  
  
folium.Marker(  
    location=[45.3300, -121.6823],  
    popup='Some Other Location',  
    icon=folium.Icon(color='red', icon='info-sign')  
) .add_to(m)
```

(example from Folium documentation)

Today's Topics

- Recap: Functions & Top Down Design
- Mapping GIS Data
- **Random Numbers**
- Indefinite Loops

Python's random package

- Python has a built-in package for generating pseudo-random numbers.

```
import turtle
import random

trey = turtle.Turtle()
trey.speed(10)

for i in range(100):
    trey.forward(10)
    a = random.randrange(0,360,90)
    trey.right(a)
```

Python's random package

- Python has a built-in package for generating pseudo-random numbers.
- To use:

```
import random
```

```
import turtle
import random

trey = turtle.Turtle()
trey.speed(10)

for i in range(100):
    trey.forward(10)
    a = random.randrange(0,360,90)
    trey.right(a)
```

Python's random package

- Python has a built-in package for generating pseudo-random numbers.

- To use:

```
import random
```

- Useful command to generate whole numbers:

```
random.randrange(start, stop, step)
```

which gives a number chosen randomly from the specified range.

```
import turtle
import random

trey = turtle.Turtle()
trey.speed(10)

for i in range(100):
    trey.forward(10)
    a = random.randrange(0, 360, 90)
    trey.right(a)
```

Python's random package

- Python has a built-in package for generating pseudo-random numbers.

- To use:

```
import random
```

- Useful command to generate whole numbers:

```
random.randrange(start, stop, step)
```

which gives a number chosen randomly from the specified range.

- Useful command to generate real numbers:

```
import turtle
import random

trex = turtle.Turtle()
trex.speed(10)

for i in range(100):
    trex.forward(10)
    a = random.randrange(0, 360, 90)
    trex.right(a)
```

Python's random package

- Python has a built-in package for generating pseudo-random numbers.

- To use:

```
import random
```

- Useful command to generate whole numbers:

```
random.randrange(start, stop, step)
```

which gives a number chosen randomly from the specified range.

- Useful command to generate real numbers:

```
random.random()
```

which gives a number chosen (uniformly) at random from $[0.0, 1.0)$.

```
import turtle
import random

trey = turtle.Turtle()
trey.speed(10)

for i in range(100):
    trey.forward(10)
    a = random.randrange(0, 360, 90)
    trey.right(a)
```

Python's random package

- Python has a built-in package for generating pseudo-random numbers.

- To use:

```
import random
```

- Useful command to generate whole numbers:

```
random.randrange(start, stop, step)
```

which gives a number chosen randomly from the specified range.

- Useful command to generate real numbers:

```
random.random()
```

which gives a number chosen (uniformly) at random from $[0.0, 1.0)$.

- Very useful for simulations, games, and testing.

```
import turtle
import random

trex = turtle.Turtle()
trex.speed(10)

for i in range(100):
    trex.forward(10)
    a = random.randrange(0, 360, 90)
    trex.right(a)
```

Trinket

```
import turtle
import random

trex = turtle.Turtle()
trex.speed(10)

for i in range(100):
    trex.forward(10)
    a = random.randrange(0,360,90)
    trex.right(a)
```

(Demo turtle
random walk)

Today's Topics

- Recap: Functions & Top Down Design
- Mapping GIS Data
- Random Numbers
- **Indefinite Loops**

Challenge:

Predict what the code will do:

```
dist = int(input('Enter distance: '))
while dist < 0:
    print('Distances cannot be negative.')
    dist = int(input('Enter distance: '))
print('The distance entered is', dist)
```

Python Tutor

```
dist = int(input('Enter distance: '))
while dist < 0:
    print('Distances cannot be negative.')
    dist = int(input('Enter distance: '))
print('The distance entered is', dist)
```

(Demo with pythonTutor)

Indefinite Loops

- Indefinite loops repeat as long as the condition is true.

```
dist = int(input('Enter distance: '))
while dist < 0:
    print('Distances cannot be negative.')
    dist = int(input('Enter distance: '))
print('The distance entered is', dist)
```

```
#Spring 2012 Final Exam, #8
nums = [1,4,0,6,5,2,9,8,12]
print(nums)
i=0
while i < len(nums)-1:
    if nums[i] < nums[i+1]:
        nums[i], nums[i+1] = nums[i+1], nums[i]
    i=i+1
print(nums)
```

Indefinite Loops

```
dist = int(input('Enter distance: '))
while dist < 0:
    print('Distances cannot be negative.')
    dist = int(input('Enter distance: '))
print('The distance entered is', dist)
```

```
#Spring 2012 Final Exam, #8
nums = [1,4,0,6,5,2,9,8,12]
print(nums)
i=0
while i < len(nums)-1:
    if nums[i] < nums[i+1]:
        nums[i], nums[i+1] = nums[i+1], nums[i]
        i=i+1
print(nums)
```

- Indefinite loops repeat as long as the condition is true.
- Could execute the body of the loop zero times, 10 times, infinite number of times.

Indefinite Loops

```
dist = int(input('Enter distance: '))
while dist < 0:
    print('Distances cannot be negative.')
    dist = int(input('Enter distance: '))
print('The distance entered is', dist)
```

```
#Spring 2012 Final Exam, #8
nums = [1,4,0,6,5,2,9,8,12]
print(nums)
i=0
while i < len(nums)-1:
    if nums[i] < nums[i+1]:
        nums[i], nums[i+1] = nums[i+1], nums[i]
        i=i+1
print(nums)
```

- Indefinite loops repeat as long as the condition is true.
- Could execute the body of the loop zero times, 10 times, infinite number of times.
- The condition determines how many times.

Indefinite Loops

```
dist = int(input('Enter distance: '))
while dist < 0:
    print('Distances cannot be negative.')
    dist = int(input('Enter distance: '))
print('The distance entered is', dist)
```

```
#Spring 2012 Final Exam, #8
nums = [1,4,0,6,5,2,9,8,12]
print(nums)
i=0
while i < len(nums)-1:
    if nums[i] < nums[i+1]:
        nums[i], nums[i+1] = nums[i+1], nums[i]
        i=i+1
print(nums)
```

- Indefinite loops repeat as long as the condition is true.
- Could execute the body of the loop zero times, 10 times, infinite number of times.
- The condition determines how many times.
- Very useful for checking input, simulations, and games.

Indefinite Loops

```
dist = int(input('Enter distance: '))
while dist < 0:
    print('Distances cannot be negative.')
    dist = int(input('Enter distance: '))
print('The distance entered is', dist)
```

```
#Spring 2012 Final Exam, #8
nums = [1,4,0,6,5,2,9,8,12]
print(nums)
i=0
while i < len(nums)-1:
    if nums[i] < nums[i+1]:
        nums[i], nums[i+1] = nums[i+1], nums[i]
        i=i+1
print(nums)
```

- Indefinite loops repeat as long as the condition is true.
- Could execute the body of the loop zero times, 10 times, infinite number of times.
- The condition determines how many times.
- Very useful for checking input, simulations, and games.
- More details next lecture...

Recap

- Top-down design: breaking into subproblems, and implementing each part separately.

Recap

- Top-down design: breaking into subproblems, and implementing each part separately.
- Excellent approach: can then test each part separately before adding it to a large program.

Recap

- Top-down design: breaking into subproblems, and implementing each part separately.
- Excellent approach: can then test each part separately before adding it to a large program.
- When possible, design so that your code is flexible to be reused (“code reuse”).

Recap

- Top-down design: breaking into subproblems, and implementing each part separately.
- Excellent approach: can then test each part separately before adding it to a large program.
- When possible, design so that your code is flexible to be reused (“code reuse”).
- Introduced a Python library, `Folium` for creating interactive HTML maps.

Recap

- Top-down design: breaking into subproblems, and implementing each part separately.
- Excellent approach: can then test each part separately before adding it to a large program.
- When possible, design so that your code is flexible to be reused (“code reuse”).
- Introduced a Python library, `Folium` for creating interactive HTML maps.
- Introduced `while` loops for repeating commands for an indefinite number of times.

Practice Quiz & Final Questions

- Lightning rounds:
 - ▶ write as much you can for 60 seconds;
 - ▶ followed by answer; and
 - ▶ repeat.
- Past exams are on the webpage (under [Final Exam Information](#)).

Practice Quiz & Final Questions

- Lightning rounds:
 - ▶ write as much you can for 60 seconds;
 - ▶ followed by answer; and
 - ▶ repeat.
- Past exams are on the webpage (under [Final Exam Information](#)).
- Theme: Functions & Top-Down Design (Summer 18, #7).

Class Reminders!

Before next lecture, don't forget to:

- Review this week's Lab

Class Reminders!

Before next lecture, don't forget to:

- Review this week's Lab
- Take the Lab Quiz

Class Reminders!

Before next lecture, don't forget to:

- Review this week's Lab
- Take the Lab Quiz 
- Submit this class's 5 programming assignments (programs 41-45)
