- a.k.a. that student will not be there on your next interview
- **Please use class time to ask questions!**

Reminder

- Students often pose as expert even when they are not
- Immediate, easy help is NOT REAL HELP
- a.k.a. that student will not be there on your next interview
- **Please use class time to ask questions!**
- Make an office hours appointment for further review!

Tutoring is Fundamental

Today's Topics

- Recap: Colors
- 2D Arrays & Image Files
- Decisions
- Design Challenge: Airplanes

Today's Topics

- **Recap: Colors**
- 2D Arrays & Image Files
- Decisions
- Design Challenge: Airplanes

Challenge

EmpID:

CSci 127 Mock Final, S19

2. (a) Fill in the boxes with the appropriate hexcode to change the color to match the comments:

```
import turtle
```

```
thomasH = turtle.Turtle()
```

i. #Change thomasH to be the color black:

```
thomasH.color("#     ")
```

ii. #Change thomasH to be the color white:

```
thomasH.color("#     ")
```

iii. #Change thomasH to be the brightest color blue:

```
thomasH.color("#     ")
```

iv. #Change thomasH to be the color purple:

```
thomasH.color("#     ")
```

v. #Change thomasH to be the color gray:

```
thomasH.color("#     ")
```

Challenge

EmpID:

CSci 127 Mock Final, S19

2. (a) Fill in the boxes with the appropriate hexcode to change the color to match the comments:

```
import turtle  
thomasH = turtle.Turtle()  
  
i. #Change thomasH to be the color black:  
    thomasH.color("#   ")  
ii. #Change thomasH to be the color white:  
    thomasH.color("#   ")  
iii. #Change thomasH to be the brightest color blue:  
    thomasH.color("#   ")  
iv. #Change thomasH to be the color purple:  
    thomasH.color("#   ")  
v. #Change thomasH to be the color gray:  
    thomasH.color("#   ")
```

- Need to fill in hexcodes (always start with #):

Challenge

- ⑤ And save your image:

```
plt.imsave('myImage.png', img)
```

More on numpy arrays

```
>>> a[0,3:5]
```

```
array([3,4])
```

```
>>> a[4:,:4]
```

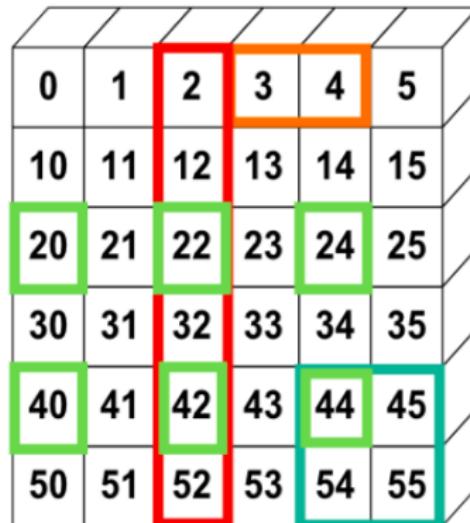

```
array([[44, 45],  
       [54, 55]])
```

```
>>> a[:,2]
```

```
array([2,12,22,32,42,52])
```

```
>>> a[2::2,:,:2]
```

```
array([[20,22,24],  
      [40,42,44]])
```

numpy tutorial

Slicing & Image Examples

- Basic pattern: $img[rows, columns, channels]$ with: $start:stop:step$.

Slicing & Image Examples

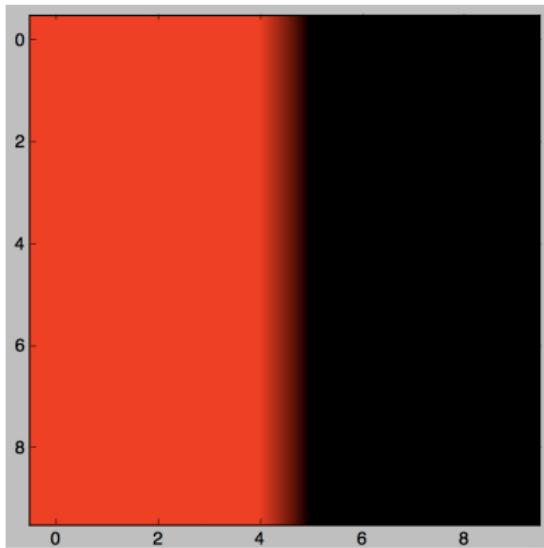

- Basic pattern: $img[rows, columns, channels]$ with: $start:stop:step$.
- Assuming the libraries are imported, what do the following code fragments produce:
 - ▶

```
img = np.zeros( (10,10,3) )
img[0:10,0:5,0:1] = 1
```

Slicing & Image Examples

- Basic pattern: $img[rows, columns, channels]$ with: $start:stop:step$.
- Assuming the libraries are imported, what do the following code fragments produce:
 - ▶

```
img = np.zeros( (10,10,3) )
img[0:10,0:5,0:1] = 1
```

Slicing & Image Examples

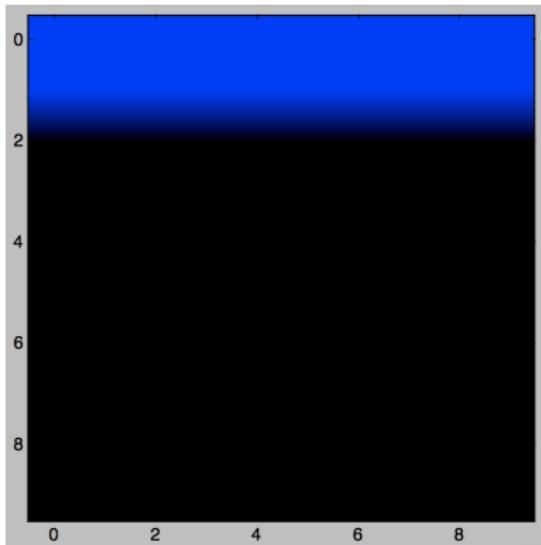

- Basic pattern: $img[rows, columns, channels]$ with: $start:stop:step$.
- Assuming the libraries are imported, what do the following code fragments produce:

- ▶ num = 10
img = np.zeros((num,num,3))
img[0:2,:,:2:3] = 1.0

Slicing & Image Examples

- Basic pattern: $img[rows, columns, channels]$ with: $start:stop:step$.
- Assuming the libraries are imported, what do the following code fragments produce:

► num = 10
img = np.zeros((num,num,3))
img[0:2,:,:2:3] = 1.0

Slicing & Image Examples

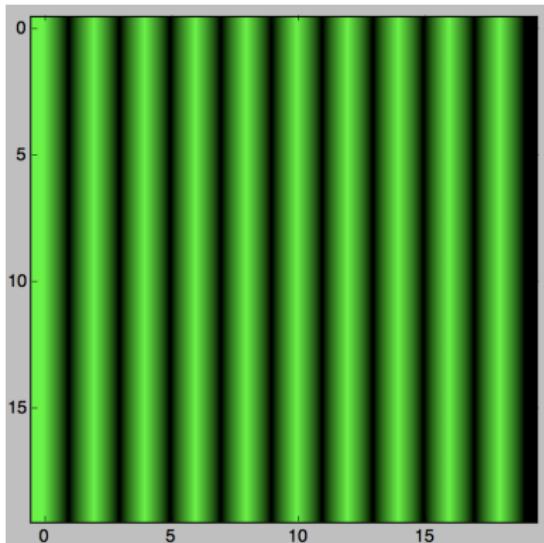

- Basic pattern: $img[rows, columns, channels]$ with: $start:stop:step$.
- Assuming the libraries are imported, what do the following code fragments produce:

```
▶ num = int(input('Enter size'))  
img = np.zeros( (num,num,3) )  
img[:,::2,1] = 1.0
```

Slicing & Image Examples

- Basic pattern: $img[rows, columns, channels]$ with: $start:stop:step$.
- Assuming the libraries are imported, what do the following code fragments produce:

- ▶ num = int(input('Enter size'))
img = np.zeros((num,num,3))
img[:,::2,1] = 1.0

Challenge

- Basic pattern: $img[rows, columns, channels]$ with: $start:stop:step$.
- Assuming the libraries are imported, what do the following code fragments produce:

```
► img = np.ones( (10,10,3) )
    img[0:10,0:5,0:2] = 0
```

Challenge

- Basic pattern: *img[rows, columns, channels]* with: *start:stop:step*.
- Assuming the libraries are imported, what do the following code fragments produce:
 - ▶

```
img = np.ones( (10,10,3) )
img[0:10,0:5,0:2] = 0
```
 - ▶

```
num = int(input('Enter size '))
img = np.ones( (num,num,3) )
img[::-2,:,:] = 0
```

Challenge

- Basic pattern: $img[rows, columns, channels]$ with: $start:stop:step$.
- Assuming the libraries are imported, what do the following code fragments produce:

- ▶

```
img = np.ones( (10,10,3) )
img[0:10,0:5,0:2] = 0
```
- ▶

```
num = int(input('Enter size '))
img = np.ones( (num,num,3) )
img[::-2,:,:] = 0
```
- ▶

```
img = np.zeros( (8,8,3) )
img[::-2,:,:,0] = 1
```

Challenge

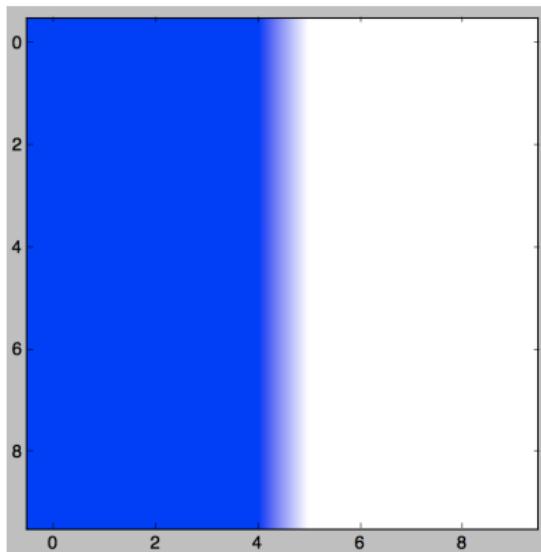

- Basic pattern: $img[rows, columns, channels]$ with: $start:stop:step$.
- Assuming the libraries are imported, what do the following code fragments produce:

► `img = np.ones((10,10,3))
img[0:10,0:5,0:2] = 0`

Challenge

- Basic pattern: $img[rows, columns, channels]$ with: $start:stop:step$.
- Assuming the libraries are imported, what do the following code fragments produce:

► `img = np.ones((10,10,3))
img[0:10,0:5,0:2] = 0`

Challenge

- ③ How can you make Python draw the logo?
Write down a "To Do" list of things you need to do.
- ④ If time, refine your steps above into a Python program.

Design a Hunter Logo

One possible solution:

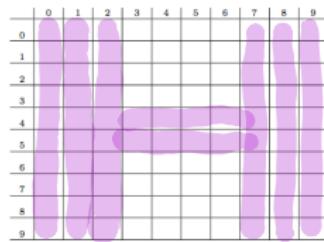

Design a Hunter Logo

- ① Create a 10 by 10 array, logo, that starts out as all white pixels.

Design a Hunter Logo

- ① Create a 10 by 10 array, logo, that starts out as all white pixels.
- ② Set the 3 left columns to be purple.

Design a Hunter Logo

0										
1										
2										
3										
4										
5										
6										
7										
8										
9										

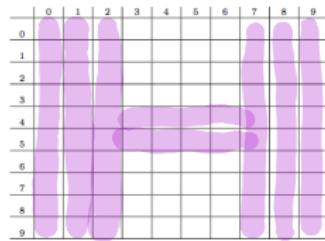

- ① Create a 10 by 10 array, logo, that starts out as all white pixels.
- ② Set the 3 left columns to be purple.
- ③ Set the 3 right columns to be purple.
- ④ Set the middle 2 rows to be purple.

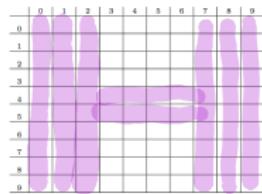

Design a Hunter Logo

- ① Create a 10 by 10 array, logo, that starts out as all white pixels.
- ② Set the 3 left columns to be purple.
- ③ Set the 3 right columns to be purple.
- ④ Set the middle 2 rows to be purple.
- ⑤ Save logo array to a file.

Translating the Design to Code

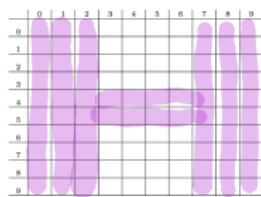

- ① Create a 10 by 10 array, logo, that starts out as all white pixels.

Translating the Design to Code

- ① Create a 10 by 10 array, logo, that starts out as all white pixels.

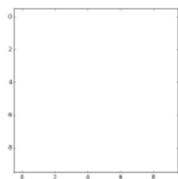

```
import matplotlib.pyplot as plt #import libraries for plotting
import numpy as np #and for arrays (to hold images)
logoImg = np.ones((10,10,3)) #10x10 array with 3 sheets of 1's
```

Translating the Design to Code

- ① Create a 10 by 10 array, logo, that starts out as all white pixels.

```
import matplotlib.pyplot as plt #import libraries for plotting
import numpy as np #and for arrays (to hold images)
logoImg = np.ones((10,10,3)) #10x10 array with 3 sheets of 1's
```

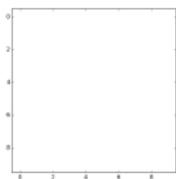

Translating the Design to Code

- ① Create a 10 by 10 array, logo, that starts out as all white pixels.

```
import matplotlib.pyplot as plt #import libraries for plotting
import numpy as np #and for arrays (to hold images)
logoImg = np.ones((10,10,3)) #10x10 array with 3 sheets of 1's
```

- ② Set the 3 left columns to be purple.

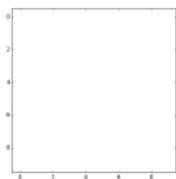

Translating the Design to Code

- ① Create a 10 by 10 array, logo, that starts out as all white pixels.

```
import matplotlib.pyplot as plt #import libraries for plotting
import numpy as np #and for arrays (to hold images)
logoImg = np.ones((10,10,3)) #10x10 array with 3 sheets of 1's
```

- ② Set the 3 left columns to be purple.

```
#To make purple, we'll keep red and blue at 100% and turn green to 0%
logoImg[:, :, 1] = 0 #Turn the green to 0 for first 3 columns
```

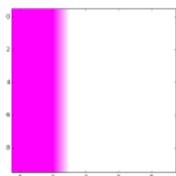

Translating the Design to Code

- ① Create a 10 by 10 array, logo, that starts out as all white pixels.

```
import matplotlib.pyplot as plt #import libraries for plotting
import numpy as np #and for arrays (to hold images)
logoImg = np.ones((10,10,3)) #10x10 array with 3 sheets of 1's
```

- ② Set the 3 left columns to be purple.

```
#To make purple, we'll keep red and blue at 100% and turn green to 0%
logoImg[:, :, 1] = 0 #Turn the green to 0 for first 3 columns
```

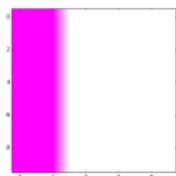

Translating the Design to Code

- ① Create a 10 by 10 array, logo, that starts out as all white pixels.

```
import matplotlib.pyplot as plt #import libraries for plotting
import numpy as np #and for arrays (to hold images)
logoImg = np.ones((10,10,3)) #10x10 array with 3 sheets of 1's
```

- ② Set the 3 left columns to be purple.

```
#To make purple, we'll keep red and blue at 100% and turn green to 0%
logoImg[:, :3, 1] = 0 #Turn the green to 0 for first 3 columns
```

- ③ Set the 3 right columns to be purple.

```
logoImg[:, -3:, 1] = 0 #Turn the green to 0 for last 3 columns
```

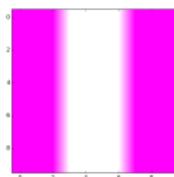

Translating the Design to Code

- ① Create a 10 by 10 array, logo, that starts out as all white pixels.

```
import matplotlib.pyplot as plt #import libraries for plotting
import numpy as np #and for arrays (to hold images)
logoImg = np.ones((10,10,3)) #10x10 array with 3 sheets of 1's
```

- ② Set the 3 left columns to be purple.

```
#To make purple, we'll keep red and blue at 100% and turn green to 0%
logoImg[:, :, 1] = 0 #Turn the green to 0 for first 3 columns
```

- ③ Set the 3 right columns to be purple.

```
logoImg[:, -3:, 1] = 0 #Turn the green to 0 for last 3 columns
```

Translating the Design to Code

- ① Create a 10 by 10 array, logo, that starts out as all white pixels.

```
import matplotlib.pyplot as plt #import libraries for plotting
import numpy as np #and for arrays (to hold images)
logoImg = np.ones((10,10,3)) #10x10 array with 3 sheets of 1's
```

- ② Set the 3 left columns to be purple.

```
#To make purple, we'll keep red and blue at 100% and turn green to 0%
logoImg[:, :, 1] = 0 #Turn the green to 0 for first 3 columns
```

- ③ Set the 3 right columns to be purple.

```
logoImg[:, -3:, 1] = 0 #Turn the green to 0 for last 3 columns
```

- ④ Set the middle 2 rows to be purple.

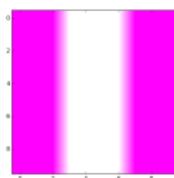

Translating the Design to Code

- ① Create a 10 by 10 array, logo, that starts out as all white pixels.

```
import matplotlib.pyplot as plt #import libraries for plotting
import numpy as np #and for arrays (to hold images)
logoImg = np.ones((10,10,3)) #10x10 array with 3 sheets of 1's
```

- ② Set the 3 left columns to be purple.

```
#To make purple, we'll keep red and blue at 100% and turn green to 0%
logoImg[:, :, 1] = 0 #Turn the green to 0 for first 3 columns
```

- ③ Set the 3 right columns to be purple.

```
logoImg[:, -3:, 1] = 0 #Turn the green to 0 for last 3 columns
```

- ④ Set the middle 2 rows to be purple.

```
logoImg[4:6, :, 1] = 0 #Turn the green to 0 for middle rows
```

Translating the Design to Code

- ① Create a 10 by 10 array, logo, that starts out as all white pixels.

```
import matplotlib.pyplot as plt #import libraries for plotting
import numpy as np             #and for arrays (to hold images)
logoImg = np.ones((10,10,3))   #10x10 array with 3 sheets of 1's
```

- ② Set the 3 left columns to be purple.

```
#To make purple, we'll keep red and blue at 100% and turn green to 0%
logoImg[:, :3, 1] = 0 #Turn the green to 0 for first 3 columns
```

Challenge

Predict what these will do (novel concepts):

```
yearBorn = int(input('Enter year born: '))
if yearBorn < 1946:
    print("Greatest Generation")
elif yearBorn <= 1964:
    print("Baby Boomer")
elif yearBorn <= 1984:
    print("Generation X")
elif yearBorn <= 2004:
    print("Millennial")
else:
    print("TBD")

x = int(input('Enter number: '))
if x % 2 == 0:
    print('Even number')
else:
    print('Odd number')
```

```
import turtle

tess = turtle.Turtle()
myWin = turtle.Screen()      #The graphics window
commands = input("Please enter a command string: ")

for ch in commands:
    #perform action indicated by the character
    if ch == 'F':           #move forward
        tess.forward(50)
    elif ch == 'L':          #turn left
        tess.left(90)
    elif ch == 'R':          #turn right
        tess.right(90)
    elif ch == '^':          #lift pen
        tess.penup()
    elif ch == 'v':          #lower pen
        tess.pendown()
    elif ch == 'B':          #go backwards
        tess.backward(50)
    elif ch == 'r':          #turn red
        tess.color("red")
    elif ch == 'g':          #turn green
        tess.color("green")
    elif ch == 'b':          #turn blue
        tess.color("blue")
    else:                   #for any other character
        print("Error: do not know the command:", c)
```

Python Tutor

```
yearBorn = int(input('Enter year born: '))
if yearBorn < 1946:
    print("Greatest Generation")
elif yearBorn <= 1964:
    print("Baby Boomer")
elif yearBorn <= 1984:
    print("Generation X")
elif yearBorn <= 2004:
    print("Millennial")
else:
    print("TBD")

x = int(input('Enter number: '))
if x % 2 == 0:
    print('Even number')
else:
    print('Odd number')
```

(Demo with pythonTutor)

IDLE

```
import turtle

tess = turtle.Turtle()
myWin = turtle.Screen()      #The graphics window
commands = input("Please enter a command string: ")

for ch in commands:
    #perform action indicated by the character
    if ch == 'F':           #move forward
        tess.forward(50)
    elif ch == 'L':          #turn left
        tess.left(90)
    elif ch == 'R':          #turn right
        tess.right(90)
    elif ch == '^':          #lift pen
        tess.penup()
    elif ch == 'v':          #lower pen
        tess.pendown()
    elif ch == 'B':          #go backwards
        tess.backward(50)
    elif ch == 'r':          #turn red
        tess.color("red")
    elif ch == 'g':          #turn green
        tess.color("green")
    elif ch == 'b':          #turn blue
        tess.color("blue")
    else:                   #for any other character
        print("Error: do not know the command:", c)
```

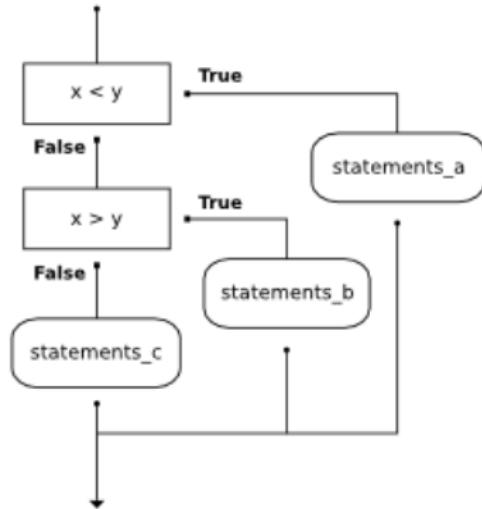

(Demo with IDLE)

Decisions

```
if x < y:  
    print("x is less than y")  
elif x > y:  
    print("x is greater than y")  
else:  
    print("x and y must be equal")
```

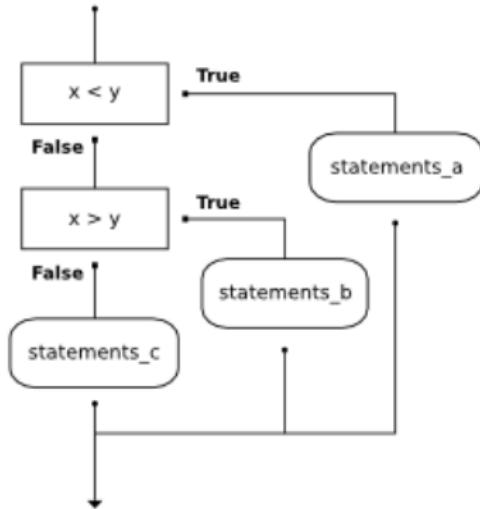

Decisions

```
if x < y:  
    print("x is less than y")  
elif x > y:  
    print("x is greater than y")  
else:  
    print("x and y must be equal")
```

Decisions

```
if x < y:  
    print("x is less than y")  
elif x > y:  
    print("x is greater than y")  
else:  
    print("x and y must be equal")
```

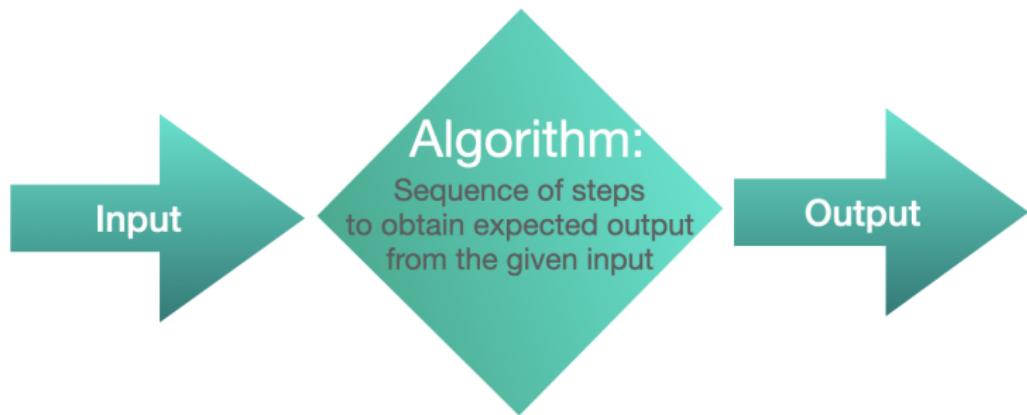

(This was just a first glance, will do much more on decisions over the next several weeks.)
