Syllabus

CSci 127: Introduction to Computer Science

*Catalog Description: 3 hours, 3 credits: This course presents an overview of computer science (CS) with an emphasis on **problem-solving and computational thinking through ‘coding’**: computer programming for beginners...*

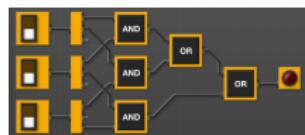

This course is pre-requisite to several introductory core courses in the CS Major. The course is also required for the CS minor. MATH 12500 or higher is strongly recommended as a co-req for intended Majors.

Syllabus: Topics

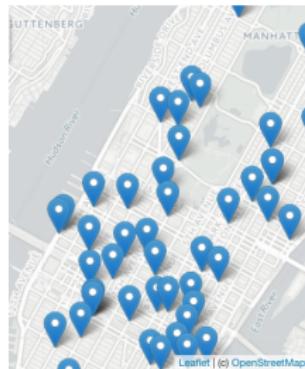

- This course assumes no previous programming experience.

pandas
 $y_{it} = \beta' x_{it} + \mu_i + \epsilon_{it}$

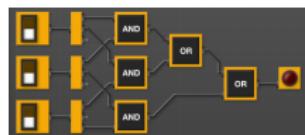

Syllabus: Topics

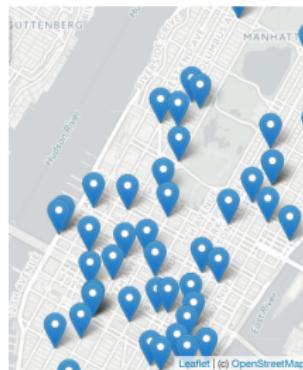

- **This course assumes no previous programming experience.**
- Organized like a fugue, with variations on this theme:

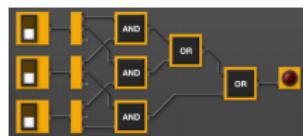

pandas
 $y_{it} = \beta' x_{it} + \mu_i + \epsilon_{it}$

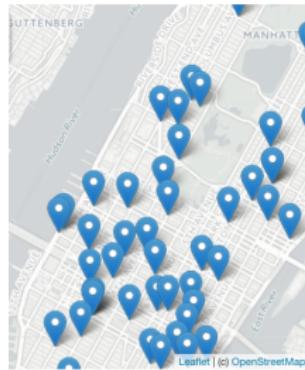

Syllabus: Topics

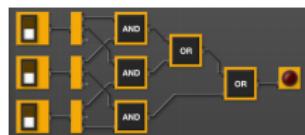

- **This course assumes no previous programming experience.**
- Organized like a fugue, with variations on this theme:
 - ▶ Introduce coding constructs in Python,

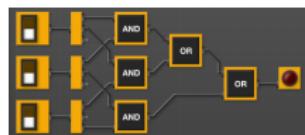

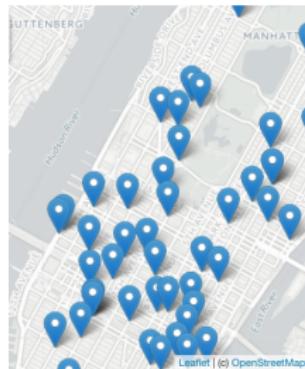

Syllabus: Topics

- **This course assumes no previous programming experience.**
- Organized like a fugue, with variations on this theme:
 - ▶ Introduce coding constructs in Python,
 - ▶ Apply those ideas to different problems (e.g. analyzing & mapping data),

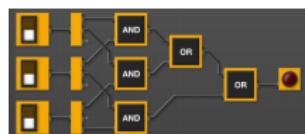

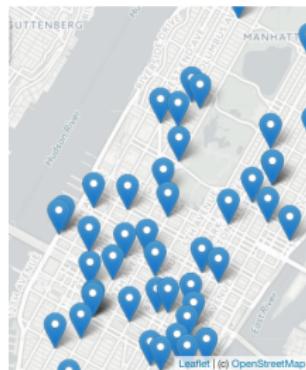

Syllabus: Topics

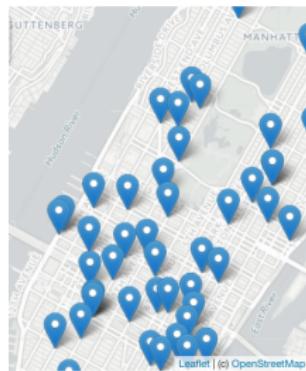

- **This course assumes no previous programming experience.**
- Organized like a fugue, with variations on this theme:
 - ▶ Introduce coding constructs in Python,
 - ▶ Apply those ideas to different problems (e.g. analyzing & mapping data),
 - ▶ See constructs again:

Syllabus: Topics

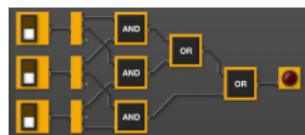

- **This course assumes no previous programming experience.**
- Organized like a fugue, with variations on this theme:
 - ▶ Introduce coding constructs in Python,
 - ▶ Apply those ideas to different problems (e.g. analyzing & mapping data),
 - ▶ See constructs again:
 - ★ for logical circuits,

Syllabus: Topics

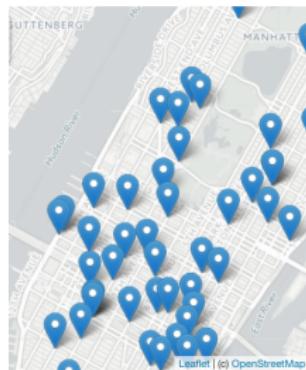

pandas
 $y_{it} = \beta' x_{it} + \mu_i + \epsilon_{it}$

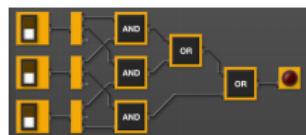

- **This course assumes no previous programming experience.**
- Organized like a fugue, with variations on this theme:
 - ▶ Introduce coding constructs in Python,
 - ▶ Apply those ideas to different problems (e.g. analyzing & mapping data),
 - ▶ See constructs again:
 - ★ for logical circuits,
 - ★ for Unix command line interface,

Syllabus: Topics

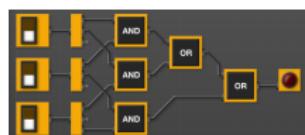

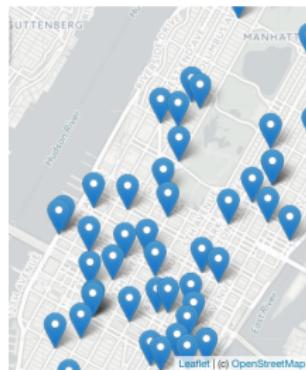

pandas
 $y_t = \beta' x_{it} + \mu_i + \epsilon_{it}$

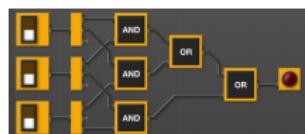

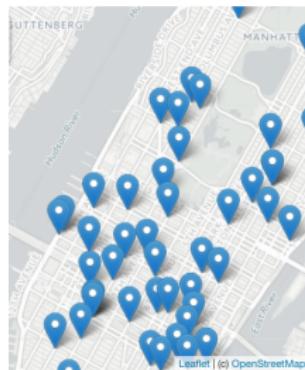

- **This course assumes no previous programming experience.**
- Organized like a fugue, with variations on this theme:
 - ▶ Introduce coding constructs in Python,
 - ▶ Apply those ideas to different problems (e.g. analyzing & mapping data),
 - ▶ See constructs again:
 - ★ for logical circuits,
 - ★ for Unix command line interface,
 - ★ for the markup language for github,

Syllabus: Topics

- **This course assumes no previous programming experience.**
- Organized like a fugue, with variations on this theme:
 - ▶ Introduce coding constructs in Python,
 - ▶ Apply those ideas to different problems (e.g. analyzing & mapping data),

- If you can write a logical argument or persuasive essay, you can write a program.
- Our first language, Python, is popular for its ease-of-use, flexibility, and extensibility, supportive community with hundreds of open source libraries and frameworks.
- The first lab goes into step-by-step details of getting Python running.
- We'll look at the design and basic structure (no worries if you haven't tried it yet).

First Program: Hello, World!

Demo in pythonTutor

First Program: Hello, World!

```
#Name: Thomas Hunter
```

```
#Date: September 1, 2017
```

```
#This program prints: Hello, World!
```

```
print("Hello, World!")
```

First Program: Hello, World!

```
#Name: Thomas Hunter           ← These lines are comments
#Date: September 1, 2017        ← (for us, not computer to read)
#This program prints: Hello, World!   ← (this one also)

print("Hello, World!")          ← Prints the string "Hello, World!" to the screen
```

- Output to the screen is: Hello, World!

First Program: Hello, World!

```
#Name: Thomas Hunter           ← These lines are comments
#Date: September 1, 2017        ← (for us, not computer to read)
#This program prints: Hello, World!   ← (this one also)

print("Hello, World!")          ← Prints the string "Hello, World!" to the screen
```

- Output to the screen is: Hello, World!
- We know that Hello, World! is a **string** (a sequence of characters) because it is surrounded by quotes

First Program: Hello, World!

```
#Name: Thomas Hunter           ← These lines are comments
#Date: September 1, 2017        ← (for us, not computer to read)
#This program prints: Hello, World!   ← (this one also)

print("Hello, World!")          ← Prints the string "Hello, World!" to the screen
```

- Output to the screen is: Hello, World!
- We know that Hello, World! is a **string** (a sequence of characters) because it is surrounded by quotes
- Can replace Hello, World! with another string to be printed.

Variations on Hello, World!

```
#Name: L-M Miranda
```

```
#Date: Hunter College HS '98
```

```
#This program prints intro lyrics
```

```
print('Get your education,')
```

*Spring18 here in Assembly Hall
Who is L-M Miranda?*

Variations on Hello, World!

```
#Name: L-M Miranda
```

```
#Date: Hunter College HS '98
```

```
#This program prints intro lyrics
```

```
print('Get your education,')
```

```
print("don't forget from whence you came, and")
```

```
print("The world's gonna know your name.")
```

- Each print statement writes its output on a new line.
- Results in three lines of output.
- Can use single or double quotes, just need to match.

Today's Topics

- Introduction to Python
- **Turtle Graphics**
- Definite Loops (for-loops)
- Algorithms

Turtles Introduction

- A simple, whimsical graphics package for Python.

Turtles Introduction

- A simple, whimsical graphics package for Python.
- Dates back to Logo Turtles in the 1960s.

Turtles Introduction

- A simple, whimsical graphics package for Python.
- Dates back to Logo Turtles in the 1960s.
- (Demo from webpage)

Turtles Introduction

- A simple, whimsical graphics package for Python.
- Dates back to Logo Turtles in the 1960s.
- (Demo from webpage)
- (Fancier turtle demo)

Today's Topics

- Introduction to Python
- Turtle Graphics
- **Definite Loops (for-loops)**
- Algorithms

Turtles Introduction

The screenshot shows a Python code editor interface. On the left, the code file `main.py` is open, containing the following Python script:

```
1 #A program that demonstrates turtles stamping
2
3 import turtle
4
5 taylor = turtle.Turtle()
6 taylor.color("purple")
7 taylor.shape("turtle")
8
9 for i in range(6):
10     taylor.forward(100)
11     taylor.stamp()
12     taylor.left(60)
```

On the right, there are two tabs: "Result" and "Instructions". The "Result" tab is active, displaying the output of the program: a purple turtle shape that has drawn a regular hexagon on the screen, with six purple star-like stamps at each vertex of the hexagon.

- Creates a turtle **variable**, called `taylor`.

Turtles Introduction

The screenshot shows a Python code editor interface. At the top, there are standard file operations: New, Open, Save, Print, and Exit. Below the toolbar, the file name is "main.py". The code area contains the following Python script:

```
1 #A program that demonstrates turtles stamping
2
3 import turtle
4
5 taylor = turtle.Turtle()
6 taylor.color("purple")
7 taylor.shape("turtle")
8
9 for i in range(6):
10     taylor.forward(100)
11     taylor.stamp()
12     taylor.left(60)
```

To the right of the code editor is a results panel. It has two tabs: "Result" and "Instructions". The "Result" tab is active, showing the output of the turtle program: a regular hexagon drawn in purple, with each vertex marked by a purple star-like stamp.

- Creates a turtle **variable**, called `taylor`.
- Changes the color (to purple) and shape (to turtle-shaped).

Turtles Introduction

The screenshot shows a Python code editor with a toolbar at the top. The code in `main.py` is:

```
1 #A program that demonstrates turtles stamping
2
3 import turtle
4
5 taylor = turtle.Turtle()
6 taylor.color("purple")
7 taylor.shape("turtle")
8
9 for i in range(6):
10     taylor.forward(100)
11     taylor.stamp()
12     taylor.left(60)
```

The **Result** pane shows a purple turtle drawing a regular hexagon with six black star-shaped stamps at each vertex.

- Creates a turtle **variable**, called `taylor`.
- Changes the color (to purple) and shape (to turtle-shaped).
- Repeats 6 times:

Turtles Introduction

The screenshot shows a Python code editor interface. On the left, the code file `main.py` is open, containing the following Python script:

```
1 #A program that demonstrates turtles stamping
2
3 import turtle
4
5 taylor = turtle.Turtle()
6 taylor.color("purple")
7 taylor.shape("turtle")
8
9 for i in range(6):
10     taylor.forward(100)
11     taylor.stamp()
12     taylor.left(60)
```

On the right, there are two tabs: "Result" and "Instructions". The "Result" tab is active, displaying the output of the program: a purple turtle shape that has drawn a regular hexagon on the screen, with six black star-like stamps at each vertex where the turtle has turned.

- Creates a turtle **variable**, called `taylor`.
- Changes the color (to purple) and shape (to turtle-shaped).
- Repeats 6 times:
 - Move forward; stamp; and turn left 60 degrees.

Turtles Introduction

The screenshot shows a Python code editor interface. The left pane displays the code file `main.py` with the following content:

```
1 #A program that demonstrates turtles stamping
2
3 import turtle
4
5 taylor = turtle.Turtle()
6 taylor.color("purple")
7 taylor.shape("turtle")
8
9 for i in range(6):
10     taylor.forward(100)
11     taylor.stamp()
12     taylor.left(60)
```

The right pane is divided into two sections: **Result** and **Instructions**. The **Result** section shows a visual output of a purple turtle drawing a regular hexagon on a white background. The turtle starts at the bottom-left, moves forward 100 units, stamps, turns 60 degrees counter-clockwise, repeats 5 more times, and ends at the top-right. The **Instructions** section is currently empty.

- Creates a turtle **variable**, called `taylor`.
- Changes the color (to purple) and shape (to turtle-shaped).
- Repeats 6 times:
 - Move forward; stamp; and turn left 60 degrees.
- Repeats any instructions **indented** in the "loop block"

Turtles Introduction

The screenshot shows a Python code editor with a toolbar at the top. The file tab shows "main.py". The code in the editor is:

```
1 #A program that demonstrates turtles stamping
2
3 import turtle
4
5 taylor = turtle.Turtle()
6 taylor.color("purple")
7 taylor.shape("turtle")
8
9 for i in range(6):
10     taylor.forward(100)
11     taylor.stamp()
12     taylor.left(60)
```

To the right of the code editor is a "Result" panel showing the output of the program. It displays a purple line forming a hexagon with six star-shaped turtle stamps at each vertex.

- Creates a turtle **variable**, called `taylor`.
- Changes the color (to purple) and shape (to turtle-shaped).
- Repeats 6 times:
 - Move forward; stamp; and turn left 60 degrees.
- Repeats any instructions **indented** in the "loop block"
- This is a **definite** loop because it repeats a fixed number of times

Your Turn!!!

Try to solve this challenge:

- ① Write a program that will draw a 10-sided polygon.
- ② Write a program that will repeat the line:
I'm lookin' for a mind at work!
three times.

Decagon Program

The screenshot shows a Python code editor with a file named `main.py` containing the following code:

```
1 #A program that demonstrates turtles stamping
2
3 import turtle
4
5 taylor = turtle.Turtle()
6 taylor.color("purple")
7 taylor.shape("turtle")
8
9 for i in range(6):
10     taylor.forward(100)
11     taylor.stamp()
12     taylor.left(60)
```

The editor has a toolbar at the top with icons for file operations like Open, Save, and Run. Below the toolbar is a tab bar with `main.py` selected. To the right of the code area are two tabs: `Result` and `Instructions`. The `Result` tab displays the output of the program, which is a purple hexagon drawn on a white background with six star-shaped stamps at each vertex.

- Start with the hexagon program.

Decagon Program

The screenshot shows a code editor window with the following details:

- Toolbar:** Includes icons for file operations (New, Open, Save, Print, etc.), a search bar, and a help icon.
- Code Area:** A text editor titled "main.py" containing the following Python code:

```
1 #A program that demonstrates turtles stamping
2
3 import turtle
4
5 taylor = turtle.Turtle()
6 taylor.color("purple")
7 taylor.shape("turtle")
8
9 for i in range(6):
10     taylor.forward(100)
11     taylor.stamp()
12     taylor.left(60)
```
- Result Area:** Displays the output of the program, which is a purple hexagon drawn on a white background. Each vertex of the hexagon has a small purple star-like stamp.
- Instructions Tab:** A tab labeled "Instructions" is visible at the top right of the result area.

- Start with the hexagon program.
- Has 10 sides (instead of 6), so change the `range(6)` to `range(10)`.

Decagon Program

The screenshot shows a code editor window with a toolbar at the top. The file tab shows "main.py". The code in the editor is:

```
1 #A program that demonstrates turtles stamping
2
3 import turtle
4
5 taylor = turtle.Turtle()
6 taylor.color("purple")
7 taylor.shape("turtle")
8
9 for i in range(6):
10     taylor.forward(100)
11     taylor.stamp()
12     taylor.left(60)
```

To the right of the editor is a "Result" panel showing a purple hexagon drawn on a white background. The hexagon has six sides and six purple star-shaped stamps at each vertex.

- Start with the hexagon program.
- Has 10 sides (instead of 6), so change the `range(6)` to `range(10)`.
- Makes 10 turns (instead of 6),
so change the `taylor.left(60)` to `taylor.left(360/10)`.

Work Program

- ② Write a program that will repeat the line:
I'm lookin' for a mind at work!
three times.

Work Program

- ② Write a program that will repeat the line:
`I'm lookin' for a mind at work!`
three times.
- Repeats three times, so, use `range(3)`:
`for i in range(3):`

Work Program

- ② Write a program that will repeat the line:
`I'm lookin' for a mind at work!`
three times.
- Repeats three times, so, use `range(3)`:
`for i in range(3):`
- Instead of turtle commands, repeating a print statement.

Work Program

- ② Write a program that will repeat the line:
`I'm lookin' for a mind at work!`
three times.
- Repeats three times, so, use `range(3)`:
`for i in range(3):`
- Instead of turtle commands, repeating a print statement.
- Completed program:
`# Your name here!`
`for i in range(3):`
 `print("I'm lookin' for a mind at work!")`

Today's Topics

- Introduction to Python
- Turtle Graphics
- Definite Loops (`for-loops`)
- **Algorithms**

What is an Algorithm?

From our textbook:

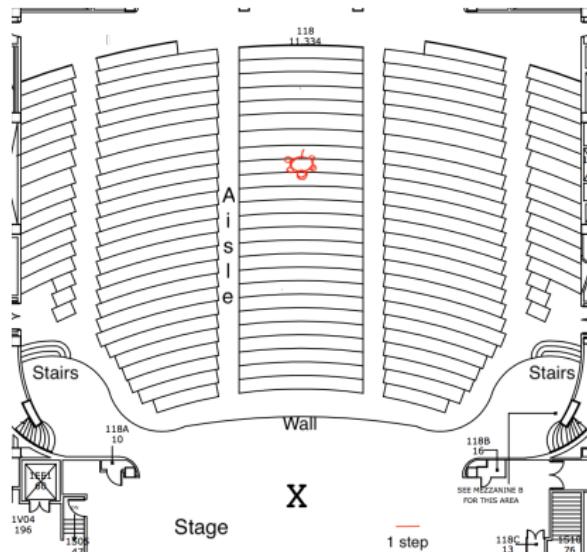

- An **algorithm** is a process or sequence of steps to be followed to solve a problem.

What is an Algorithm?

From our textbook:

- An **algorithm** is a process or sequence of steps to be followed to solve a problem.
- Programming is a skill that allows a computer scientist to take an algorithm and represent it in a notation (a program) that can be executed by a computer.

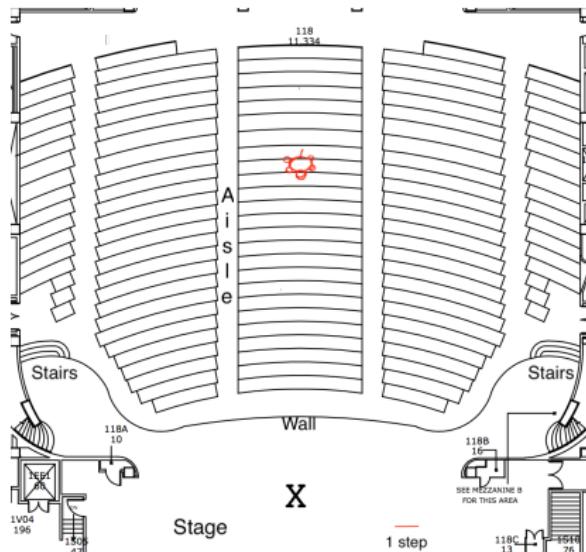

Your Turn!!!

Try to solve this challenge:

- ① This is the floor plan of Assembly Hall at Hunter College.

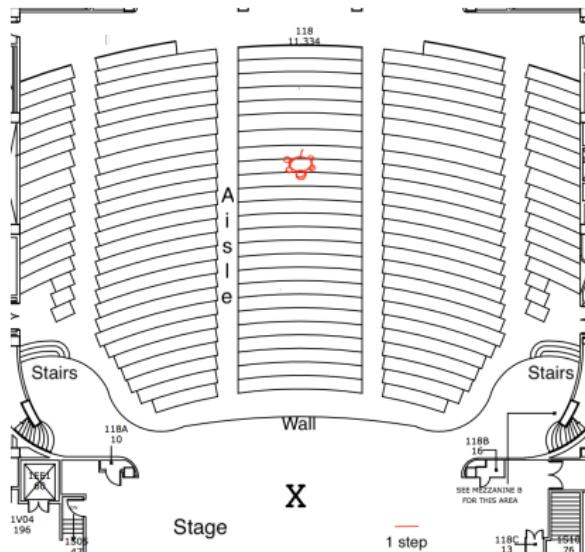

Your Turn!!!

Try to solve this challenge:

- ① This is the floor plan of Assembly Hall at Hunter College.
- ② Write an algorithm (step-by-step directions) to the red turtle to the X

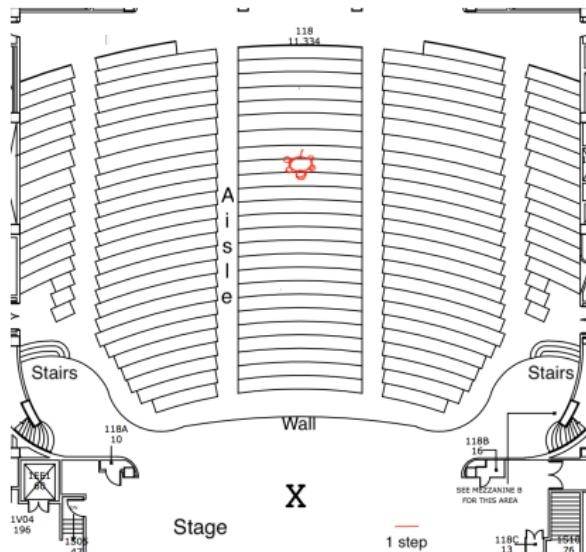

Your Turn!!!

Try to solve this challenge:

- ① This is the floor plan of Assembly Hall at Hunter College.
- ② Write an algorithm (step-by-step directions) to the red turtle to the X
- ③ Basic Rules:

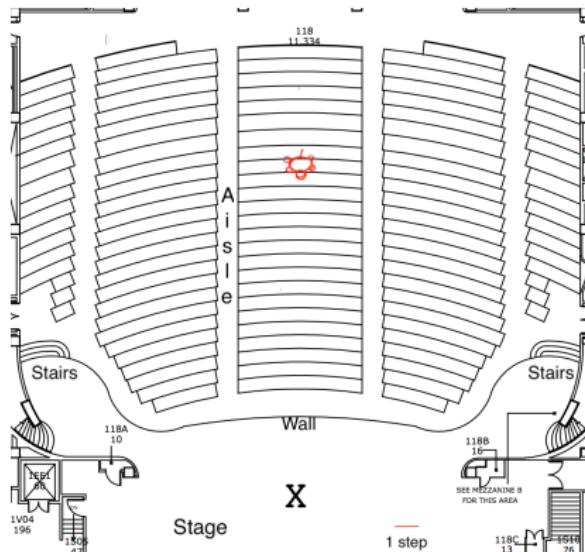

Your Turn!!!

Try to solve this challenge:

- ① This is the floor plan of Assembly Hall at Hunter College.
- ② Write an algorithm (step-by-step directions) to the red turtle to the X.
- ③ Basic Rules:
 - ▶ Use turtle commands.

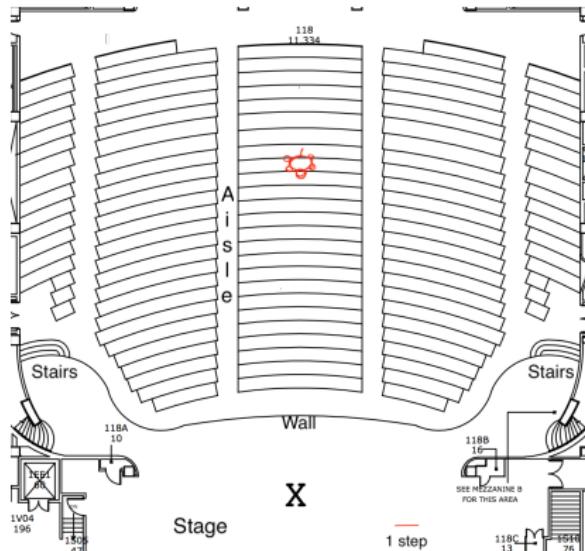

Your Turn!!!

Try to solve this challenge:

- ① This is the floor plan of Assembly Hall at Hunter College.
- ② Write an algorithm (step-by-step directions) to the red turtle to the X.
- ③ Basic Rules:
 - ▶ Use turtle commands.
 - ▶ Do not run turtles into walls, chairs, obstacles, etc.

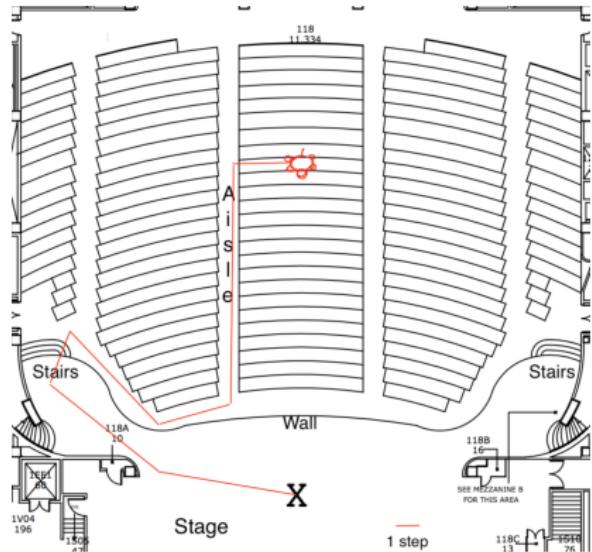

Your Turn!!!

Try to solve this challenge:

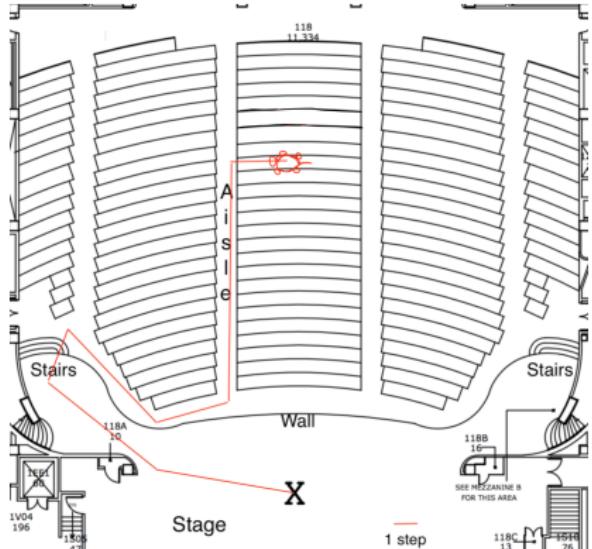

- ① This is the floor plan of Assembly Hall at Hunter College.
- ② Write an algorithm (step-by-step directions) to the red turtle to the X.
- ③ Basic Rules:
 - ▶ Use turtle commands.
 - ▶ Do not run turtles into walls, chairs, obstacles, etc.
 - ▶ Turtles cannot climb walls, must use stairs (walk forward on steps).

Your Turn!!!

One possible solution:

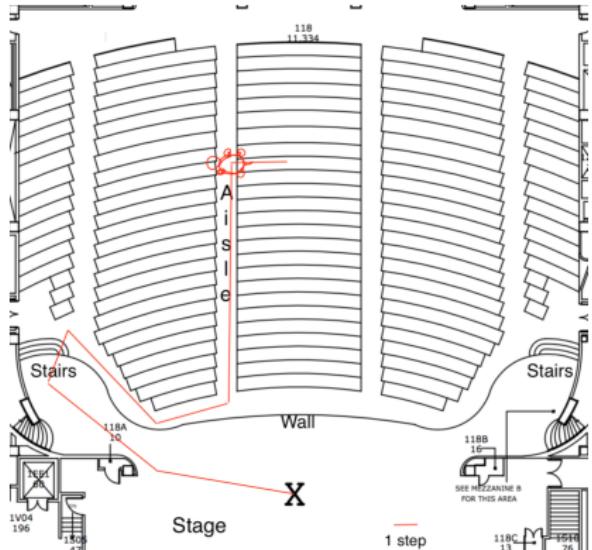

Your Turn!!!

- Turn right 90 degrees.

One possible solution:

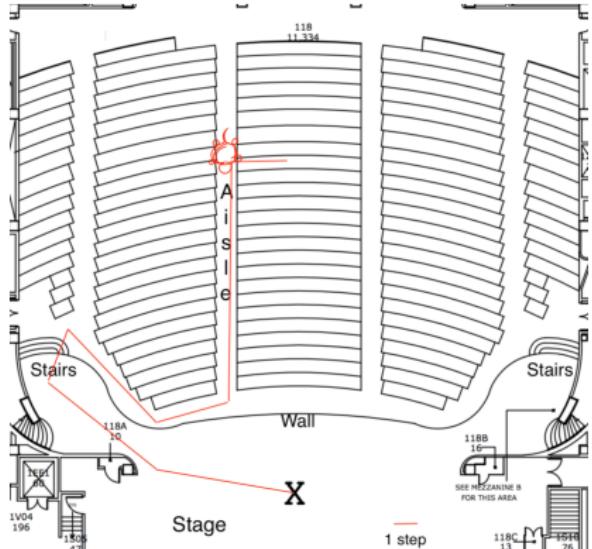

Your Turn!!!

- Turn right 90 degrees.
- Walk forward 3 steps.

One possible solution:

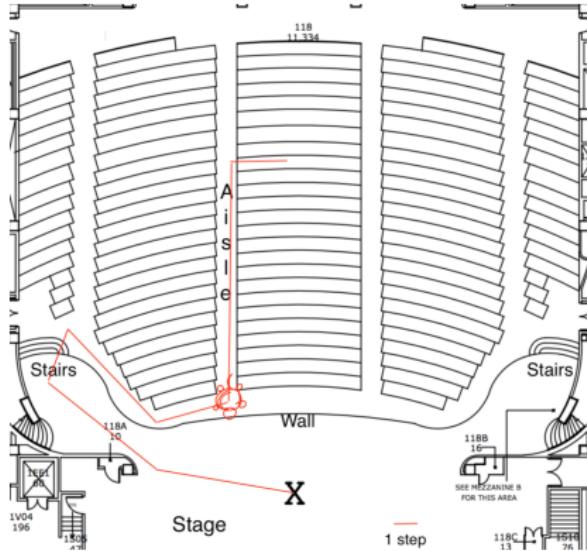

Your Turn!!!

- Turn right 90 degrees.
- Walk forward 3 steps.
- Turn left 90 degrees.

One possible solution:

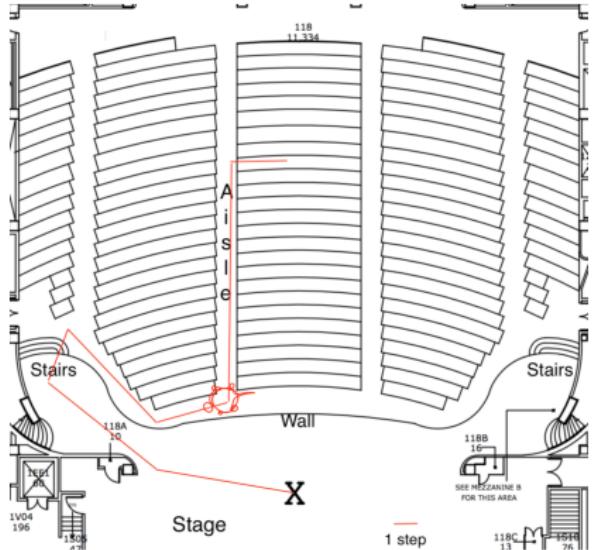

Your Turn!!!

- Turn right 90 degrees.
- Walk forward 3 steps.
- Turn left 90 degrees.
- Walk forward 10 steps.

One possible solution:

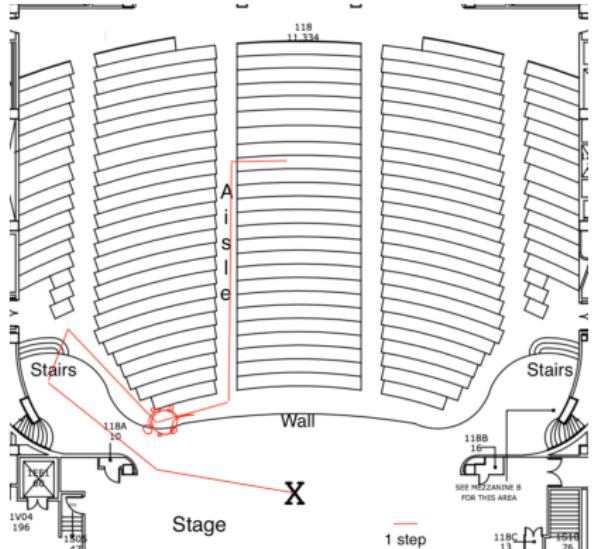

Your Turn!!!

- Turn right 90 degrees.
- Walk forward 3 steps.
- Turn left 90 degrees.
- Walk forward 10 steps.
- Turn right 65 degrees

One possible solution:

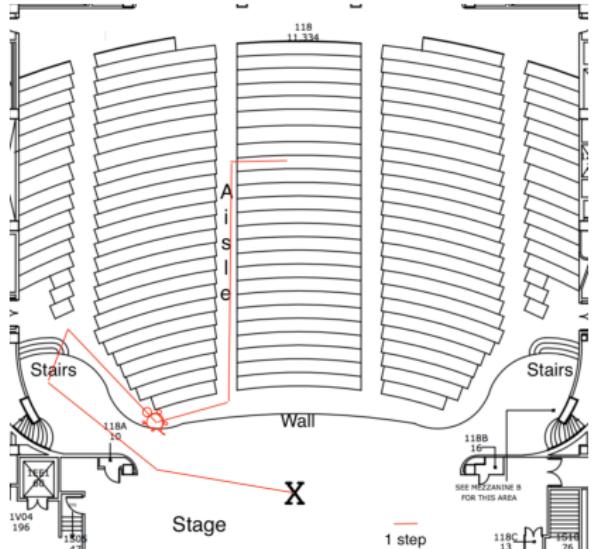

Your Turn!!!

- Turn right 90 degrees.
- Walk forward 3 steps.
- Turn left 90 degrees.
- Walk forward 10 steps.
- Turn right 65 degrees.
- Walk forward 4 steps.

One possible solution:

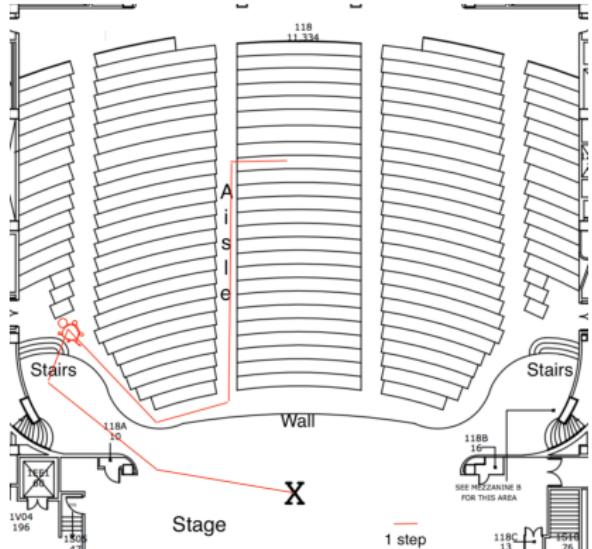

Your Turn!!!

- Turn right 90 degrees.
- Walk forward 3 steps.
- Turn left 90 degrees.
- Walk forward 10 steps.
- Turn right 65 degrees.
- Walk forward 4 steps.
- Turn right 45 degrees.

One possible solution:

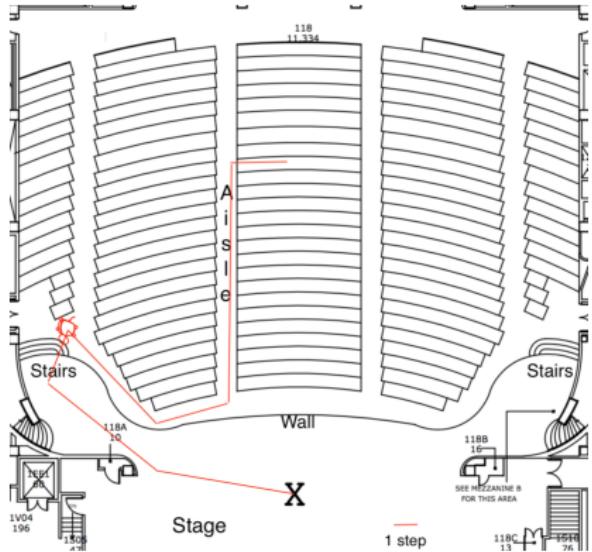

Your Turn!!!

One possible solution:

- Turn right 90 degrees.
- Walk forward 3 steps.
- Turn left 90 degrees.
- Walk forward 10 steps.
- Turn right 65 degrees.
- Walk forward 4 steps.
- Turn right 45 degrees.
- Walk forward 6 steps.

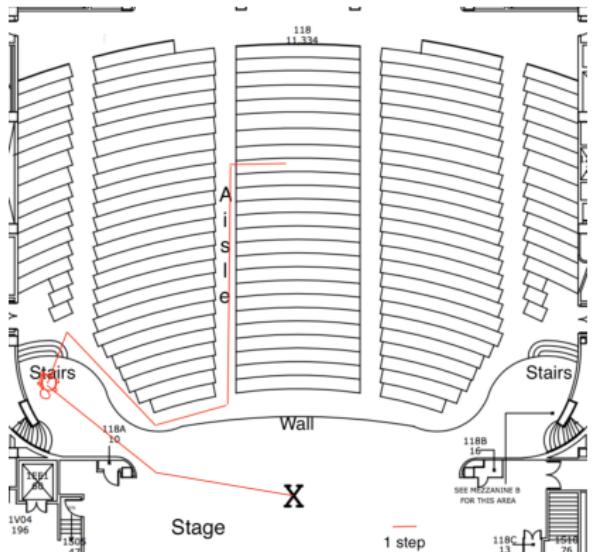

Your Turn!!!

One possible solution:

- Turn right 90 degrees.
- Walk forward 3 steps.
- Turn left 90 degrees.
- Walk forward 10 steps.
- Turn right 65 degrees.
- Walk forward 4 steps.
- Turn right 45 degrees.
- Walk forward 6 steps.
- Turn left 110 degrees.

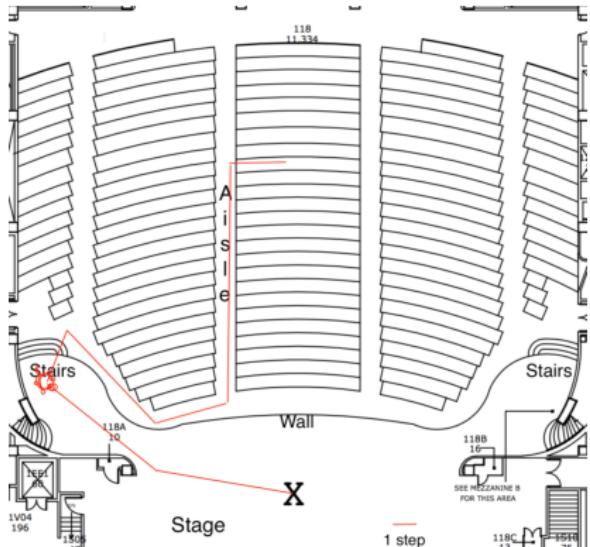

Your Turn!!!

One possible solution:

- Turn right 90 degrees.
- Walk forward 3 steps.
- Turn left 90 degrees.
- Walk forward 10 steps.
- Turn right 65 degrees.
- Walk forward 4 steps.
- Turn right 45 degrees.
- Walk forward 6 steps.
- Turn left 110 degrees.
- Walk forward 3 steps.

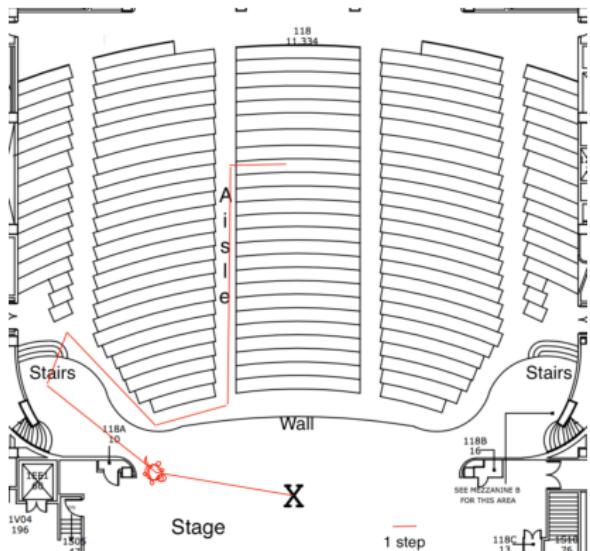

Your Turn!!!

One possible solution:

- Turn right 90 degrees.
- Walk forward 3 steps.
- Turn left 90 degrees.
- Walk forward 10 steps.
- Turn right 65 degrees.
- Walk forward 4 steps.
- Turn right 45 degrees.
- Walk forward 6 steps.
- Turn left 110 degrees.
- Walk forward 3 steps.
- Turn left 80 degrees.

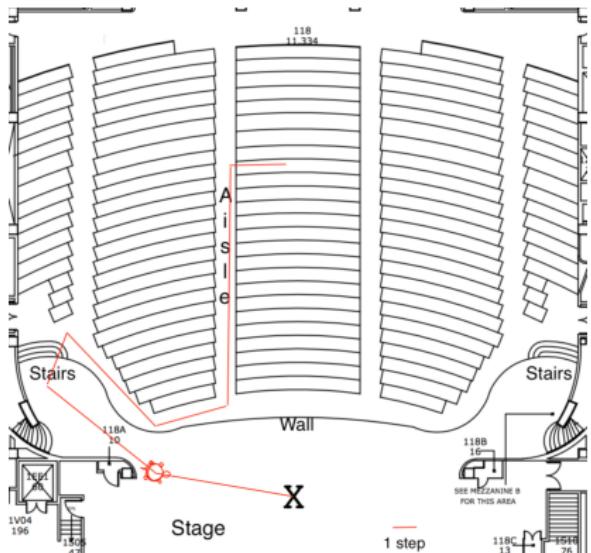

Your Turn!!!

One possible solution:

- Turn right 90 degrees.
- Walk forward 3 steps.
- Turn left 90 degrees.
- Walk forward 10 steps.
- Turn right 65 degrees.
- Walk forward 4 steps.
- Turn right 45 degrees.
- Walk forward 6 steps.
- Turn left 110 degrees.
- Walk forward 3 steps.
- Turn left 80 degrees.
- Walk forward 5 steps.

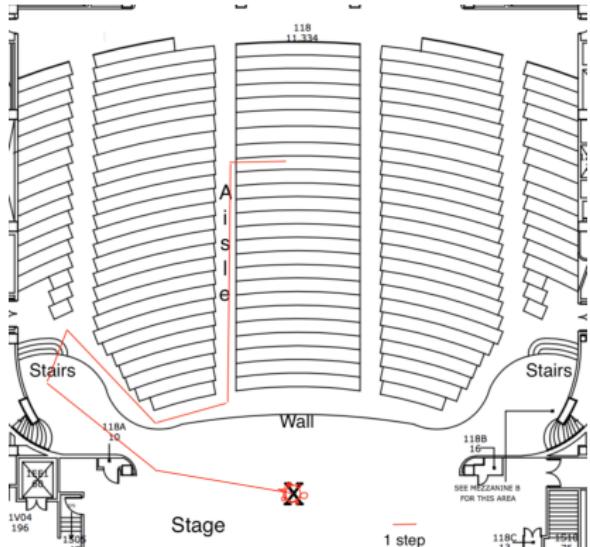

Your Turn!!!

One possible solution:

- Turn right 90 degrees.
- Walk forward 3 steps.
- Turn left 90 degrees.
- Walk forward 10 steps.
- Turn right 65 degrees.
- Walk forward 4 steps.
- Turn right 45 degrees.
- Walk forward 6 steps.
- Turn left 110 degrees.
- Walk forward 3 steps.
- Turn left 80 degrees.
- Walk forward 5 steps.
- Turn left 30 degrees.

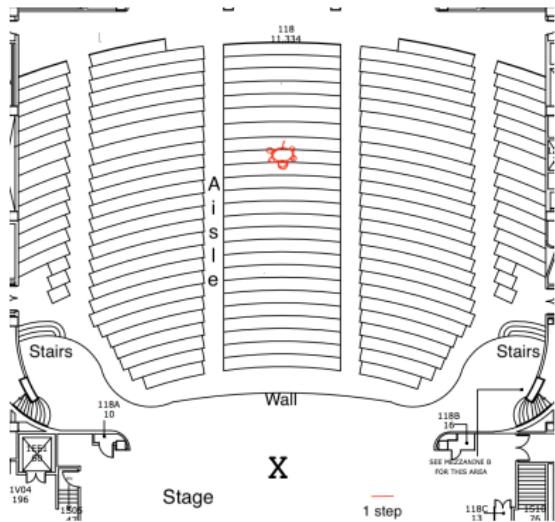

Your Turn!!!

One possible solution:

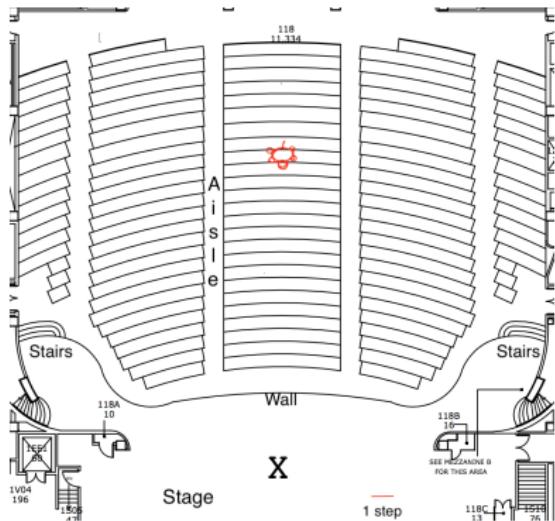

- Turn right 90 degrees.
- Walk forward 3 steps.
- Turn left 90 degrees.
- Walk forward 10 steps.
- Turn right 65 degrees.
- Walk forward 4 steps.
- Turn right 45 degrees.
- Walk forward 6 steps.
- Turn left 110 degrees.
- Walk forward 3 steps.
- Turn left 80 degrees.
- Walk forward 5 steps.
- Turn left 30 degrees.
- Walk forward 6 steps. Reached X!!!

Your Turn!!!

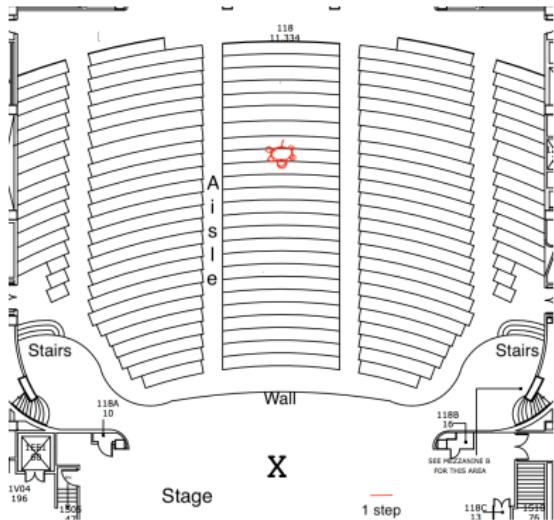

- For fun, share your algorithm in the chat

Your Turn!!!

- For fun, share your algorithm in the chat
- "Test and Debug" other students' posted solutions and reply to their chats if you find a bug!

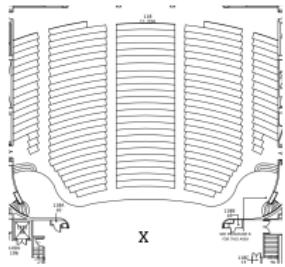

Your Turn!!!

- For fun, share your algorithm in the chat
- "Test and Debug" other students' posted solutions and reply to their chats if you find a bug!
- Degrees the turtle turns are approximate, any good approximation is considered correct.

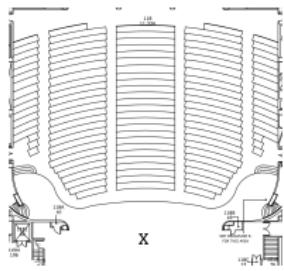

Recap

- Writing precise algorithms is difficult.

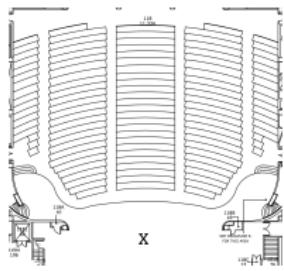

Recap

- Writing precise algorithms is difficult.
- In Python, we introduced:

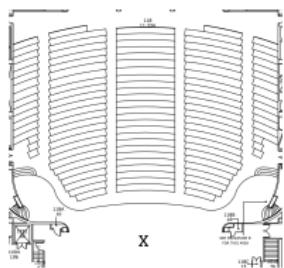

Recap

Recap

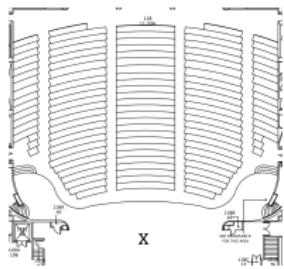

- Writing precise algorithms is difficult.
- In Python, we introduced:
 - ▶ **strings**, or sequences of characters,
 - ▶ **print()** statements,
 - ▶ **for-loops** with **range()** statements, &
 - ▶ **variables** containing turtles.

Recap

- Writing precise algorithms is difficult.
- In Python, we introduced:
 - ▶ **strings**, or sequences of characters,
 - ▶ **print()** statements,
 - ▶ **for-loops** with **range()** statements, &
 - ▶ **variables** containing turtles.

Reminders!

Before next class, don't forget to:

- Review this week's Lab

Reminders!

Before next class, don't forget to:

- Review this week's Lab
- Take the Lab Quiz today

Reminders!

Before next class, don't forget to:

- Review this week's Lab
- Take the Lab Quiz today
- Submit this week's 5 programming assignments (programs 1-5)
