# FINAL EXAM, VERSION 2 CSci 127: Introduction to Computer Science Hunter College, City University of New York

16 December 2019

# Exam Rules

- Show all your work. Your grade will be based on the work shown.
- The exam is closed book and closed notes with the exception of an 8 1/2" x 11" piece of paper filled with notes, programs, etc.
- When taking the exam, you may have with you pens and pencils, and your note sheet.
- You may not use a computer, calculator, tablet, phone, earbuds, or other electronic device.
- Do not open this exam until instructed to do so.

Hunter College regards acts of academic dishonesty (e.g., plagiarism, cheating on examinations, obtaining unfair advantage, and falsification of records and official documents) as serious offenses against the values of intellectual honesty. The College is committed to enforcing the CUNY Policy on Academic Integrity and will pursue cases of academic dishonesty according to the Hunter College Academic Integrity Procedures.

I understand	I understand that all cases of academic dishonesty will be reported to the							
Dean of Stud	lents	and	will 1	esult	in s	ancti	ons.

1.	(a)	What will the following Python code print:		
		<pre>pioneers = "Easley;Annie/Wilkes;Mary</pre>		
		<pre>i. print(pioneers.count('A'))</pre>	Output:	_
		<pre>print(pioneers[-5:].upper())</pre>		
		<pre>names = pioneers.split('/')</pre>	0	_
		m = names[1]	Output:	٦
		n. print(m[7:])		
		for n in names:	Output:	
		iii. print(n.split(';')[0])	•	٦
		•		
				_
	(b)	Consider the following shell commands:		
		Ф 2000		
		<pre>\$ pwd /Users/login/hwk</pre>		
		\$ ls		
		tickets.csv p30.py p40.py nyc.csv		
		i. What is the output for:		
		\$ mkdir csci127	Output:	٦
		\$ mv *csv csci127		
		\$ ls		
				_
		ii. What is the output for:		
		·	Output:	
		\$ cd csci127		
		\$ ls   grep nyc		
		Ψ IB   grop nyc		_
		iii. What is the output for:	Output:	
			<b>Ծ</b> աւթաւ.	_
		\$ cd/		
		\$ pwd		

2. (a) Consider the code:

import turtle
thomasH = turtle.Turtle()

- i. After the command: thomasH.color("#000000"), what color is thomasH?

  □ black □ green □ white □ gray □ purple
- ii. After the command: thomasH.color("#00BC00"), what color is thomasH?

  □ black □ green □ white □ gray □ purple
- iii. Fill in the code below to change thomasH to be the color white:

thomasH.color("# ")

iv. Fill in the code below to change thomasH to be the brightest red:

thomasH.color("# ")

(b) Fill in the code to produce the output on the right:

- i. for i in range( ):
  print(i, end=" ")

plt.show()

import numpy as np
import matplotlib.pyplot as plt
iv. im = np.ones((10,10,3))
im[1:: , 1:: , :] = 0
plt.matshow(im)
plt.show()

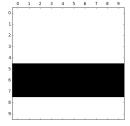

# Output:

0 1 2 3 4

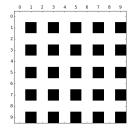

## Output:

1 2 3 4 5

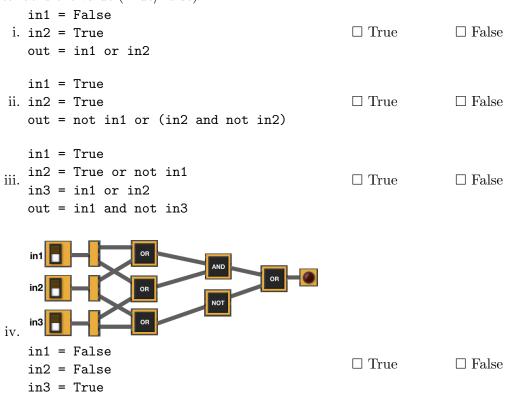

### Output:

### **Output:**

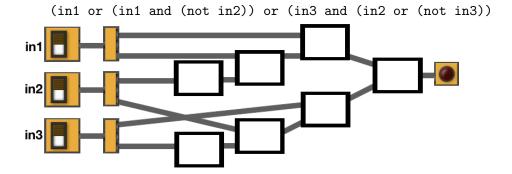

3. (a) What is the value (True/False):

(b) Draw a circuit that implements the logical expression:

(c) Fill in the circuit that implements the logical expression:

4. (a) Draw the output for the function calls:

```
import turtle
2:
    tom = turtle.Turtle()
    tom.shape('turtle')
4:
    def ramble(ty, dist, stamp):
5:
        if dist > 10:
6:
             for i in range(3):
7:
                  ty.left(120)
8:
                  ty.forward(dist)
             ramble(ty,dist//2,stamp)
9:
10:
        elif stamp:
11:
             for i in range(3):
12:
                   ty.forward(20)
13:
                   ty.stamp()
14:
        else:
15:
             ty.forward(20)
```

i. ramble(tom,8,False)

ii. ramble(tom,100,True)

(b) What are the formal parameters for ramble():

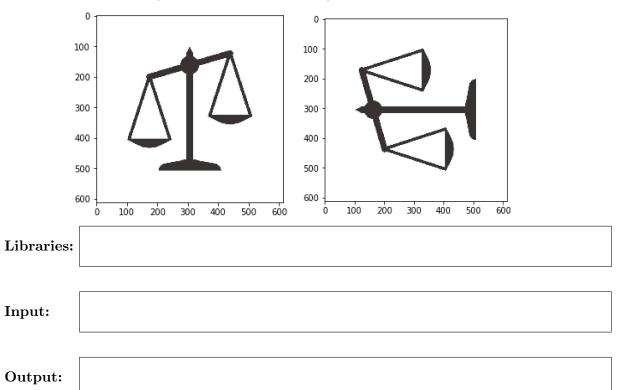

(c) If you call ramble(tom,8,False), which branches of the function are tested (check all that apply):

- $\square$  The block of code at Lines 6-9.
- $\square$  The block of code at Lines 11-13.
- $\square$  The block of code at Line 15.
- □ None of these blocks of code (lines 6-9, 11-13, 15) are visited from this invocation (call).

(d) If you call ramble(tom, 100, True), which branches of the function are tested (check all that apply):

- $\square$  The block of code at Lines 6-9.
- $\Box$  The block of code at Lines 11-13.
- $\square$  The block of code at Line 15.
- □ None of these blocks of code (lines 6-9, 11-13, 15) are visited from this invocation (call).

5. Design an algorithm that rotates an image by 90 degrees to the left. For simplicity, you may assume a square image (i.e. same hight and length)

Process (as a list of steps):

6. Given the FiveThirtyEight dataset containing data on nearly 3 million tweets sent from Twitter handles connected to the Internet Research Agency, a Russian "troll factory", a snapshot given in the image below:

author	content	region	language	publish_date	harvested_date	following	followers	updates

 $\square$  J SETUP # If not, jump back to SETUP for loop

 $\square$  DONE: ADDI \$t0, \$zero, 0 # Null (0) to terminate string

 $\square$  ADDI \$sp, \$sp, -10 # Set up stack to print

 $\square$  ADDI \$v0, \$zero, 4 # 4 is for print string

 $\square$  ADDI \$a0, \$sp, 0 # Set \$a0 to stack pointer for printing

 $\square$  syscall # Print to the log

9. What is the output of the following C++ programs?

```
//Quote by Adele Goldberg
   #include <iostream>
                                                  Output:
   using namespace std;
   int main()
   {
        cout << "Don't ask whether\nyou ";</pre>
        cout << "can do something, \nbut";</pre>
(a)
        cout << " how to do it.";</pre>
        cout << endl << "A.G.";</pre>
        return 0;
   }
   #include <iostream>
   using namespace std;
   int main()
   {
                                                 Input: 50,75,150 Output:
        double num = 0;
        double weight = 0;
        while (weight < 100) {
            cout <<"Please enter weight\n";</pre>
(b)
            cin >> weight;
            num++;
        }
        cout << num << endl;</pre>
        return 0;
   }
   #include <iostream>
                                                  Output:
   using namespace std;
   int main(){
        int i, j;
        for (i = 4; i > 0; i--){
            for (j = 0; j < i; j++){}
                 if(j \% 2 == 0)
(c)
                     cout << "0";
                 else
                     cout << "X";
            }
            cout << endl;</pre>
        }
        return 0;
   }
```

10. (	(a)	Translate the following program into a <b>complete C++ program</b> :
		<pre>#Python Loops, V2 for i in range(1,20,4):     print('*',i,'*')</pre>
		//include library and namespace
		//function signature
		{ //loop line
		//loop body
		//return
		}

(b)	The number	er of Twitter	monthly	active us	ers grew	from	$\sim 10$	million	in 3	2010	to	$\sim$ 68	million
	in 2019. T	he average a	nnual grov	wth rate	can then	be es	tima	ted as					

$$avgGrowth = \frac{\%growth}{number-of-years} = \frac{100 \cdot \frac{68-10}{10}}{2019 - 2010} = 64.4\%$$

We can thus estimate the average annual growth: avgGrowth = 64.4%.

Write a **complete C++ program** that asks the user for a year greater than 2010 (assume user complies) and prints the estimated number (in millions) of Twitter users in that year.

//include library and namespace
//function signature
{
//initialize variables
//obtain input
//calculate users
//output users
//return
า
